Second Edition is authored by one or more acknowledged experts and then carefully edited to ensure a consistent level of
quality and approach throughout There are new chapters on passive devices RF and microwave packaging electronic
package assembly and cost evaluation and assembly while organic and ceramic substrates are now covered in separate
chapters All the hallmarks of the First Edition which became an industry standard and a popular graduate level textbook
have been retained An Instructor s Manual presenting detailed solutions to all the problems in the book is available upon

Baidyk,Donald C. Wunsch,2009-12-01 Micromechanical manufacturing based on microequipment creates new possibi ties in
goods production If microequipment sizes are comparable to the sizes of the microdevices to be produced it is possible to
decrease the cost of production drastically The main components of the production cost material energy space consumption
equipment and maintenance decrease with the scaling down of equipment sizes To obtain really inexpensive production labor
costs must be reduced to almost zero For this purpose fully automated microfactories will be developed To create fully
automated microfactories we propose using arti cial neural networks having different structures The simplest perceptron like
neural network can be used at the lowest levels of microfactory control systems Adaptive Critic Design based on neural
network models of the microfactory objects can be used for manufacturing process optimization while associative projective
neural n works and networks like ART could be used for the highest levels of control systems We have examined the
performance of different neural networks in traditional image recognition tasks and in problems that appear in
micromechanical manufacturing We and our colleagues also have developed an approach to mic equipment creation in the
form of sequential generations Each subsequent gene tion must be of a smaller size than the previous ones and must be
made by previous generations Prototypes of rst generation microequipment have been developed and assessed
