Applied Probability-Computer Science: The Interface Volume 1 Ralph L. Disney, Teunis J. Ott, 2013-03-07 These two volumes are the Proceedings of the first special interest meeting instigated and organized by the joint Technical Section and College in Applied Probability of ORSA and THIS This meeting which took place January 5 7 1981 at Florida Atlantic University in Boca Raton Florida had the same name as these Proceedings Applied Probability Computer Science the Interface The goal of that conference was to achieve a meeting of and a cross fertilization between two groups of researchers who from different starting points had come to work on similar problems often developing similar methodologies and tools One of these groups are the applied probabilists many of whom consider their field an offspring of mathematics and who find their motivation in many areas of application The other is that group of computer scientists who over the years have found an increasing need in their work for the use of probabilistic models The most visible area of common methodology between these two groups is networks of queues Hhich by itself could have been the theme of an entire conference FunctionQl areas which are or are becoming sources of exciting problems are computer performance analysis data base analysis analysis of communication protocols data networks and mixed voice data telephone networks The reader can add to this list by going through the papers in these Proceedings *Applied Probability— Computer Science: The Interface* Ralph L. Disney, 1982 Applied probability computer science, the interface 03 a84, *Coding, Cryptography and Combinatorics* Keqin Feng, Harald Niederreiter, Chaoping Xing, 2004-06-25 It has long been recognized that there are fascinating connections between coding theory cryptology and combinatorics Therefore it seemed desirable to us to organize a conference that brings together experts from these three areas for a fruitful exchange of ideas We decided on a venue in the Huang Shan Yellow Mountain region one of the most scenic areas of China so as to provide the additional inducement of an attractive location The conference was planned for June 2003 with the official title Workshop on Coding Cryptography and Combinatorics CCC 2003 Those who are familiar with events in East Asia in the first half of 2003 can guess what happened in the end namely the conference had to be cancelled in the interest of the health of the participants The SARS epidemic

posed too serious a threat At the time of the cancellation the organization of the conference was at an advanced stage all invited speakers had been selected and all abstracts of contributed talks had been screened by the program committee Thus it was decided to call on all invited speakers and presenters of accepted contributed talks to submit their manuscripts for publication in the present volume Altogether 39 submissions were received and subjected to another round of refereeing After careful scrutiny 28 papers were accepted for publication

Interfaces in Computer Science and Operations Research R. S. Barr, R.V. Helgason, Jeffrey L. Kennington, 2012-12-06 The disciplines of computer science and operations research OR have been linked since their origins each contributing to the dramatic advances of the other This work explores the connections between these key technologies how high performance computing methods have led to advances in OR deployment and how OR has contributed to the design and development of advanced systems The collected writings from researchers and practitioners in Computer Science Operations Research Management Science and Artificial Intelligence were among those delivered at the Fifth INFORMS Computer Science Technical Section Conference in Dallas Texas January 8 10 1996 The articles advance both theory and practice Presented are new approaches to complex problems based on metaheuristics neural networks genetic algorithms and Tabu Search optimization and mathematical programming stochastic methods constraint programming and logical analysis These advanced methodologies are applied to new applications in such areas as telecommunications network design financial engineering manufacturing project management and forecasting airline and machine scheduling vehicle routing modeling and decision support systems Featured is a remarkable paper by keynote speaker Fred Glover creator of the Tabu Search family of metaheuristics In it he develops the principles of memory based heuristic methods contrasts them with the popular genetic algorithms and simulated annealing provides a sweeping survey of application vignettes and points to promising avenues for future research

the Analysis of Algorithms Daniel H. Greene, Donald E. Knuth, 1990-09-01 This monograph collects some fundamental mathematical techniques that are required for the analysis of algorithms It builds on the fundamentals of combinatorial analysis and complex variable theory to present many of the major paradigms used in the precise analysis of algorithms emphasizing the more difficult notions The authors cover recurrence relations operator methods and asymptotic analysis in a format that is concise enough for easy reference yet detailed enough for those with little background with the material

An Introduction to Quantum Computing Algorithms Arthur O. Pittenger, 2012-12-06 In 1994 Peter Shor 65 published a factoring algorithm for a quantum computer that finds the prime factors of a composite integer N more efficiently than is possible with the known algorithms for a classical computer Since the difficulty of the factoring problem is crucial for the security of a public key encryption system interest and funding in quantum computing and quantum computation suddenly blossomed Quantum computing had arrived The study of the role of quantum mechanics in the theory of computation seems to have begun in the early 1980s with the publications of Paul Benioff 67 who considered a quantum mechanical model of computers and the computation process A related question was discussed shortly thereafter by Richard Feynman 35 who began from a different perspective by asking what kind of computer should be used to simulate physics His analysis led him to the belief that with a suitable class of quantum machines one could imitate any quantum system Automata Theory and

its Applications Bakhadyr Khossainov, Anil Nerode, 2012-12-06 The theory of finite automata on finite strings infinite strings and trees has had a distinguished history First automata were introduced to represent idealized switching circuits augmented by unit delays This was the period of Shannon McCullough and Pitts and Howard Aiken ending about 1950 Then in the 1950s there was the work of Kleene on representable events of Myhill and Nerode on finite coset congruence relations on strings of Rabin and Scott on power set automata In the 1960s there was the work of Btichi on automata on infinite strings and the second order theory of one successor then Rabin's 1968 result on automata on infinite trees and the second

order theory of two successors The latter was a mystery until the introduction of forgetful determinacy games by Gurevich and Harrington in 1982 Each of these developments has successful and prospective applications in computer science They should all be part of every computer scientist's toolbox Suppose that we take a computer scientist's point of view One can think of finite automata as the mathematical representation of programs that run using fixed finite resources Then Buchi's SIS can be thought of as a theory of programs which run forever like operating systems or banking systems and are deterministic Finally Rabin's S2S is a theory of programs which run forever and are nondeterministic Indeed many questions of verification can be decided in the decidable theories of these automata
