Applying General Equilibrium:

Applying General Equilibrium John B. Shoven, John Whalley, 1992-05-29 The central idea underlying this work is to convert the Walrasian general equilibrium structure formalized in the 1950s by Kenneth Arrow Gerard Debreu and others from an abstract representation of an economy into realistic models of actual economies **Applying general equilibrium**

John B. Shoven, John Whalley, 1992 **Applying General Equilibrium** John B. Shoven, John Whalley, 1992-05-29 The aim of this book is to make more widely available a body of recent research activity that has become known as applied general equilibrium analysis The central idea underlying this work is to convert the Walrasian general equilibrium structure formalized in the 1950s by Kenneth Arrow Gerard Debreu and others from an abstract representation of an economy into realistic models of actual economies Numerical empirically based general equilibrium models can then be used to evaluate concrete policy options by specifying production and demand parameters and incorporating data reflective of real economies Shoven and Whalley describe all aspects of developing applied general equilibrium models including developing an appropriate equilibrium structure calibrating the model compiling counterfactual equilibria and interpreting results The authors contend that the Walrasian general equilibrium model provides an ideal framework for appraising the effects of policy changes on resource allocation assessing who gains and who loses and the policy impacts not well covered by empirical macro models The applications in the book illustrate a number of ways in which fresh insights are provided in long standing policy controversies **Notes and Problems in Applied General Equilibrium Economics** K.R. Pearson, B.R. Parmenter, A.A. Powell, P.J. Wilcoxon, P.B. Dixon, 2014-06-28 General equilibrium refers to an analytical approach which looks at the economy as a complete system of inter dependent components industries households investors governments importers and exporters Applied means that the primary interest is in systems that can be used to provide quantitative analysis of economic policy problems in particular countries Reflecting the authors belief in the models as vehicles for practical policy analysis a considerable amount of material on data and solution techniques as well as on theoretical structures has been included The sequence of chapters follows what is seen as the historical development of the subject The book is directed at graduate students and professional economists who may have an interest in constructing or applying general equilibrium models The exercises and readings in the book provide a comprehensive introduction to applied general equilibrium modeling To enable the reader to acquire hands on experience with computer implementations of the models which are described in the book a companion set of diskettes is available [Notes and Problems in Applied General Equilibrium Economics](#) B. Dixon, K.R. Pearson, 1992 **Trade, Networks and Hierarchies** Geoffrey J.D. Hewings, Michael Sonis, David Boyce, 2013-04-18 In 1989 after several years of discussion and negotiation the Regional Economics Applications Laboratory REAL was formed This unique relationship between the Federal Reserve Bank of Chicago and the University of Illinois at Urbana Champaign has been a significant source of intellectual inspiration for many students visiting colleagues and

members of the participating institutions for the past decade The idea for REAL was hatched by Philip Israilevich and Geoffrey Hewings in typical Chicago style in the back room of a local bar In early December 1997 their collaboration came to an untimely end when Philip died after a three year battle with cancer The challenge of moving across a spectrum from theory to model development to implementation and interpretation provided the underlying motivation for REAL s formation together with an equally important component namely the translation of many of these efforts into a form that could be understood and implemented by policy makers For Philip REAL and the Regional Science Association International provided the forums for his intellectual endeavors although he also contributed many papers in banking In recognition of his contributions and to provide a sense of the current research in the fields in which he published many of the authors of these chapters assembled in Chicago in November 1998 to participate in a small seminar in his honor Several others who were not able to come nevertheless contributed chapters to this volume Subsequently all of the papers have been revised and updated
