

Rufous-bellied Nitava

Nitava sumatrana

- **Distribution:** From the Himalayas, across Southeast Asia to China.
- **Size:** 10cm (4in).
- **Diet:** Livefood, softbill food and pellets, fruit.
- **Sexing:** Cocks are much more colourful, hens being predominantly brownish with a blue spot on each side of the neck.
- **Compatibility:** Keep pairs apart, although they will live satisfactorily in captivity alongside other softbills of similar size.

These flycatchers can be delicate when first obtained and need to be kept warm, at an ambient temperature of about 18°C (64°F). Once acclimatized, however, they can prove reasonably hardy. They show a natural preference for livefood and require a densely planted flight where they can forage for insects, but do encourage them to eat a variety of other foods. If the birds do not have access to an outside aviary, you will need to provide regular bathing facilities.

Nitavas often favour a ledge or open-fronted nestbox as a nesting site, and will need moss for the nest itself. Four eggs form a typical clutch, and during the incubation

period of 14 days the hen sits alone. An unlimited supply of livefood is important to ensure that the chicks are reared satisfactorily. The supply must also be maintained throughout the post-weaning period, woodlice often being favoured by these birds. The chicks will leave the nest when they are about 14 days old.

Lesser Green Broadbill

Caloptomena viridis

- **Distribution:** Malay Peninsula, Borneo and Sumatra.
- **Size:** 16.5cm (6.5in).
- **Diet:** Fruit, softbill food, mynah pellets and livefood.
- **Sexing:** Hens are duller overall and also lack the black markings of the cock bird.
- **Compatibility:** Often kept in tropical houses alongside other species.

This particular species of broadbill is generally frugivorous in its feeding habits, making it relatively easy to adapt to aviary life. However, the birds are sensitive to cold and are often kept indoors, with heating if necessary.

A spectacular, if somewhat shy, species that thrives best in a planted tropical house setting. It needs warm surroundings and a diet that includes plenty of fruit.

There are 18 recognized species in all, but only the Green Broadbills are usually seen in aviculture. In the wild, they live in dense jungle. Their relatively large eyes seem to suggest that they are crepuscular by nature (i.e. active at dawn and dusk), but very little is known about their habits.

Their nests, commonly located above water, are elaborate structures, suspended from the branch above by strands of nesting material.
