Childs Representation Of The World:

The Child's Representation of the World George Butterworth, 2012-03-13 Although central to theories of cognitive development the concept of representation remains subtle and elusive This collection of papers reflects a variety of individual emphases none of which are mutually exclusive The papers have been arranged in four groups mainly along lines of related subject matter but also to illustrate different aspects of the development of representation In Piaget's theory representation is defined as the making present of an object which is not present to the senses Furth 1969 Representation has both a figurative and an operative aspect The organisation of the content of the representation the figurative aspect depends on the operations of thought or on the schemes co ordinating action This use of the term is applic able both to internal representations such as visual images and to external representation such as children's drawings However it presupposes no necessary relation between a mental image and a graphic representation The first part of the book consists of papers on children's drawing The operative aspect of representation emerges in the serial ordering problems encountered by young children who produce tadpole figures Freeman Chapter 1 The figurative aspect of graphic representation is vividly illustrated by the drawings of the autistic child Nadia Selfe Chapter 2 One further issue which emerges concerns the relation between linguistic and graphic representation

Child Psychology and Pedagogy Maurice Merleau-Ponty, 2010-06-30 Maurice Merleau-Ponty is one of the few major phenomenologists to engage extensively with empirical research in the sciences and the only one to examine child psychology with rigor and in such depth His writings have recently become increasingly influential as the findings of psychology and cognitive science inform and are informed by phenomenological inquiry Merleau-Ponty's Sorbonne lectures of 1949 to 1952 are a broad investigation into child psychology psychoanalysis pedagogy phenomenology sociology and anthropology They argue that the subject of child psychology is critical for any philosophical attempt to understand individual and intersubjective existence Talia Welsh's new translation provides Merleau-Ponty's complete lectures on the seminal engagement of phenomenology and psychology

The Politics of Children's Rights and Representation Bengt Sandin, Jonathan Josefsson, Karl Hanson, Sarada Balagopalan, 2023-03-11 This open access edited volume investigates children and youth's deep entanglement in today's major global national and local transformations and processes wherein they are not mere spectators and objects of transformations but instead actively shape them through various social economic and political representations International contributions illuminate the problems that arise when children's rights and participation become a site of contestation and power over who represents whom what when and where The authors do not provide simple solutions instead offering an understanding of the fundamental nature of these problems as founded in the application of rights and the nature of representation in modern society Together the authors emphasize that child representation must take into account the local and spatial context of how representations of children are discussed as well as possible discrepancies between local regional national and global processes
