Export Product Quality, Renewable Energy, and Sustainable Production, 3rd edition Umer Shahzad,Gagan Deep Sharma,Lianbiao Cui ,John Mendy,2025-11-20 Economic development has long been acknowledged for its beneficial effects on human well being In the context of economic globalization and vertical specialization increasing the quality of export products is more critical and necessary to export success and sustainable development The product s quality is inextricably linked to its manufacture and production which need various types of energy and raw materials Meanwhile the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production Therefore product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources sustainable production and environmental regulations as well as the nature of export competitiveness Generally export product quality has referred to the quality of manufactured products within the product lines Quality refers to the relative price of a country s varieties within their respective product lines Product sophistication assesses the composition of the aggregate exports Different varieties of same product as per quality level are being produced by several developing and emerging economies Within any given product line quality converges both conditionally and unconditionally to the world s benchmark increases in institutional quality and human capital are associated with faster quality upgrading In turn faster growth in quality is associated with more rapid output growth The existing literature has mostly concentrated on the question of whether environmental regulation enhances or erodes export competitiveness offering some valuable insights into Porter s theory but it lacks a coherent theoretical framework Little research has been done to examine the relationship between export product quality and renewable energy sources manufacturing and overall sustainable production calling for advancement of the scholarship to tackle this burning issue Numerous concerns have been expressed over the appalling connection between sustained development industry and environmental protection The United Nations UN adopted the 2030 Agenda for Sustainable Development in 2015 to balance economic social and environmental

development through the introduction of 17 Sustainable Development Goals (SDGs) which encouraged researchers in trade, environment, energy, and related fields to adopt an integrative rather than isolative approach. This research topic is dedicated to the study of the environment through the lenses of export product quality, export policies, and sustainable production. The aim is to advance knowledge in the fields of export quality, trade perspectives, renewable energy, the environment, and sustainable production through the dissemination of research that promotes holistic sustainability for the greater welfare of humanity. This topic will prioritize research focusing on emerging and developing economies. Academic scholars and researchers must both test hypotheses and put forward ideas for new solutions. For example, it is assumed that higher quality products require expensive inputs and resources for manufacturing. It must also provide strategies for a speedy and economically viable transition to renewable energy. This research topic is a step in this direction.

The Role of Law and Regulation in Sustaining Financial Markets Niels Philipsen, Guangdong Xu, 2014-11-13. This book explores the role of law and regulation in sustaining financial markets in both developed and developing countries, particularly the European Union, United States, and China. The central argument of this book is that law matters for the operation of financial markets, which in turn significantly influences the performance of firms, industries, and economies. The *Role of Law and Regulation in Sustaining Financial Markets* is divided into four parts. Part one addresses the connection between law, financial development, and economic growth. Part two deals with the role of financial regulation, which can be used to correct market failures such as negative externalities, information asymmetries, and monopolies. Part three focuses on the design, functioning, and performance of different financial instruments. Part four examines the topic of Corporate Social Responsibility. This book contributes to the law and finance literature by studying certain conventional issues such as the relationship between finance and economic growth and the effects of regulatory quality on financial development from new perspectives and/or with new evidence, data, and cases. It also explores novel topics such as project finance, contracts, insurance, and climate change, the shadow banking system, that have been overlooked in current literature. This book is meaningful not only for the EU and the US, which have suffered considerably from the financial crisis of 2008, but also for China, which is struggling to build a sound institutional infrastructure to govern its increasingly complicated financial system. By comparing the regulatory philosophies and practices of the EU, the US, and China, this book will help the reader to understand the diverse nature of the global law and finance nexus and avoid succumbing to the myth of one size fits all.

Interactions Between China's National Emissions Trading Scheme and Electricity Market: Practices and Policies Tsun Se Cheong, Xunpeng (Roc) Shi, Yongping Sun, Jian Yu, Xin Yao, 2023-11-03. China's national carbon market, the world's largest emissions trading scheme (ETS), kicked off its first online trade recently. This can be called a milestone for the country towards the nation's goals of having CO₂ emissions peak before 2030 and achieving carbon neutrality by 2060. China's national ETS initially covers the power sector before being expanded to a much broader set of energy-intensive industries.

On one hand the electricity sector the largest carbon emitting industry is responsible for about 40% of China's emissions and it has great significance to response to global climate change On the other hand the effectiveness of China's ETS will rest on how well it is coordinated with power market regulations and policies In this regard the deepening of reform as well as the advanced technology and its applications in the electricity market will add new challenges and opportunities to electricity trade which in turn influences national ETS Therefore this brings urgency to accurately capture the dynamic interactions between national ETS and electricity market to transform carbon trading into a practical and effective way to decarbonize the power sector
