Diffusion Of Chloride In Concrete Theory And Application:

Diffusion of Chloride in Concrete E. Poulsen,2014-04-21 This is a comprehensive and rigorous presentation on chloride ingress in concrete drawing on test results and field observations as well as mathematical principles It is written for practising engineers and is also a useful reference for engineering students [Transport and Interactions of Chlorides in Cement-based Materials](#) Caijun Shi,Qiang Yuan,Fuqiang He,Xiang Hu,2019-07-26 Chloride induced corrosion is the most important durability issue of reinforced concrete structures and the prediction and prevention of chloride induced corrosion has attracted considerable interest all over the world Given that chloride penetrates through the concrete cover the issues concerning its transport are crucial These include testing methods prediction and the prevention of ingress During the transport process physical and chemical interaction occurs between chloride and cement hydrates which in turn affects the further transport so the transport of chloride and these interactions are closely related and underpin our understanding of chloride induced corrosion in RC structures This book provides in depth discussion of chloride transport and its interaction in cement based materials and reviews and summarizes the state of the art The mechanisms and testing methods for chloride transport chemical interactions of chloride with cement hydrates chloride binding isotherms measurement of penetration depths factors affecting chloride transport and modeling of chloride transport are discussed in detail This book serves as a reference for researchers or engineer and a textbook for graduate students **Durability Design of Concrete Structures in Severe Environments** Odd E. GjØrv,2014-02-07 One of the most pressing problems facing the construction industry globally is the deterioration of major concrete infrastructure in marine and other chloride containing environments While recent advancements in concrete technology have made it easier to control the negative impact of deteriorating processes such as alkali aggregate reaction free [Bridge Maintenance, Safety, Management, Digitalization and Sustainability](#) Jens Sandager Jensen,Dan M. Performance of Cement-Based Materials in Aggressive Aqueous Environments Mark Alexander,Alexandra Bertron,Nele De Belie,2012-12-18 Concrete and cement based materials must operate in increasingly aggressive aqueous environments which may be either natural or industrial These materials may suffer degradation in which ion addition and or ion exchange reactions occur leading to a breakdown of the matrix microstructure and consequent weakening Sometimes this degradation can be extremely rapid and serious such as in acidic environments while in other cases degradation occurs over long periods Consequences of material failure are usually severe adversely affecting the health and well being of human communities and disturbing ecological balances There are also large direct costs of maintaining and replacing deteriorated infrastructure and indirect costs from loss of production during maintenance work which place a great burden on society The focus of this book is on addressing issues concerning performance of cement based materials in aggressive aqueous environments by way of this State of the Art Report The book represents the work of many well known and respected authors who contributed chapters or parts of chapters Four main themes were addressed I Nature and kinetics of degradation and deterioration mechanisms of cement based materials in aggressive aqueous environments II Modelling of deterioration in such environments III Test methods to assess performance of cement based materials in such environments and which can be used to characterise and rate relative performance and inform long term predictions IV Engineering implications and

consequences of deterioration in aggressive aqueous environments and engineering approaches to the problem **Control Criteria and Materials Performance Studies for Cathodic Protection of Reinforced Concrete** John J.

Bartholomew,1993 This work investigated the feasibility of improved and simplified control criteria for cathodic protection of concrete structures Corrosion rates of steel were established in a simulated concrete environment as a function of chloride contamination pH temperature and cathodic protection current mathematical models were developed to establish concentration profiles which develop as a result of cathodic protection current and to study current distributions which result from geometric factors These studies are combined to develop improved and simplified current based control criteria Long term effects of cathodic protection current on concrete and aggregate near the steel and the anode were also investigated
