## **Dynamics Of Topologically Generic Homeomorphisms:**

Dynamics of Topologically Generic Homeomorphisms Ethan Akin, Mike Hurley, Judy Anita Kennedy, 2003 The goal of this work is to describe the dynamics of generic homeomorphisms of certain compact metric spaces  $X$  Here generic is used in the topological sense a property of homeomorphisms on  $X$  is generic if the set of homeomorphisms with the property contains a residual subset in the sense of Baire category of the space of all homeomorphisms on  $X$  The spaces  $X$  we consider are those with enough local homogeneity to allow certain localized perturbations of homeomorphisms for example any compact manifold is such a space We show that the dynamics of a generic homeomorphism is quite complicated with a number of distinct dynamical behaviors coexisting some resemble subshifts of finite type others which we call generalized adding machines appear strictly periodic when viewed to any finite precision but are not actually periodic Such a homeomorphism has infinitely many intricately nested attractors and repellers and uncountably many distinct dynamically connected components of the chain recurrent set We single out several types of these chain components and show that each type occurs densely in an appropriate sense in the chain recurrent set We also identify one type that occurs generically in the chain recurrent set We also show that at least for  $X$  a manifold the chain recurrent set of a generic homeomorphism is a Cantor set so its complement is open and dense Somewhat surprisingly there is a residual subset of  $X$  consisting of points whose limit sets are chain components of a type other than the type of chain components that are residual in the space of all chain components In fact for each generic homeomorphism on  $X$  there is a residual subset of points of  $X$  satisfying a stability condition stronger than Lyapunov stability

**The Topological Dynamics of Ellis Actions** Ethan Akin, Joseph Auslander, Eli Glasner, 2008 An Ellis semigroup is a compact space with a semigroup multiplication which is continuous in only one variable An Ellis action is an action of an Ellis semigroup on a compact space such that for each point in the space the evaluation map from the semigroup to the space is continuous At first the weak linkage between the topology and the algebra discourages expectations that such structures will have much utility However Ellis has demonstrated that these actions arise naturally from classical topological actions of locally compact groups on compact spaces and provide a useful tool for the study of such actions In fact via the apparatus of the enveloping semigroup the classical theory of topological dynamics is subsumed by the theory of Ellis actions The authors exposition describes and extends Ellis theory and demonstrates its usefulness by unifying many recently introduced concepts related to proximality and distality Moreover this approach leads to several results which are new even in the classical setup

The Space of Dynamical Systems with the  $C^0$ -Topology Sergei Yu. Pilyugin, 2006-11-15 This book is an introduction to main methods and principal results in the theory of  $C^0$  remark 0 is upper index small perturbations of dynamical systems It is the first comprehensive treatment of this topic In particular  $C^0$  upper index generic properties of dynamical systems topological stability perturbations of attractors limit sets of domains are discussed The book contains some new results Lipschitz shadowing of pseudotrajectories in structurally stable diffeomorphisms for instance The aim of the author was to simplify and to visualize some basic proofs so the main part of the book is accessible to graduate students in pure and applied mathematics The book will also be a basic reference for researchers in various fields of dynamical systems and their applications especially for those who study attractors or pseudotrajectories generated by numerical methods
