Dynamics Of Tuna Movements An Evaluation:

The Dynamics of Tuna Movements John R. Hunter, 1986-01-01 Weaknesses in understanding of tuna distributions and movements have constrained the development of rational management policies Uncertainties exist in the selection of management plans and catch and effort data that are representative of a stock quantification of exchange of adults among management jurisdictions and fishing gears and identification of the relationships between the environment and tuna movements This report summarizes a series of discussions between a panel and groups of experts on how to increase understanding of these and other tuna problems We discuss the uncertainties in current management policy caused by lack of understanding of tuna movement dynamics We describe and evaluate the research approaches presently used to describe the movements of tunas mark and recapture and acoustic tracking and those which might be used or are just being applied including new tagging systems measurement of physiological state and microconstituents of mineralized tissue Actions needed to improve the knowledge of tuna movements are 1 establish international arrangements to share tuna movement data to analyse movements on an oceanwide and worldwide basis and to link international oceanographic programs 2 increase number and kinds of observations of movements of tuna in the vertical plane 3 develop and use technology for tracing the actual paths followed by tunas over extended periods and for measuring movements independent of the fishery and 4 conduct intensive studies on tuna movement dynamics which combine old with the new technologies discussed in the report *Administrative Report LJ*, **U.S. West Coast Fisheries for Highly Migratory Species, Fishery Management Plan**, 2003 [Electronic Tagging and Tracking in Marine Fisheries](#) John R. Sibert, Jennifer L. Nielsen, 2013-03-09 Reviews Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced forward looking methodologies technologies or perspectives in fish and is especially dedicated to relevant topics addressing global fisheries This series international concern in fish and fisheries Humans continue to challenge our environments with new technologies and technological applications The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems This is especially true for aquatic networks of creeks lakes rivers and ocean environments We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales This book series will provide a window into the developing dynamic among humans aquatic ecosystems both freshwater and marine and the organisms that inhabit aquatic environments There are many reasons to doubt the increasing social and economic value technology has gained over the last two centuries Science and technology represent stages in human development I agree with Ernst Mayer when he said in *Toward a New Philosophy of Biology* 1988 that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive if not totally irrelevant **Collective**
