Abstract: Ulcerative colitis (UC) is a risk factor for the development of inflammation-associated dysplasia or colitis-associated neoplasia (CAN). This transformation results from chronic inflammation, which induces changes in epithelial proliferation, survival, and migration via the induction of chemokines and cytokines. There are notable differences in genetic mutation profiles between CAN in UC patients and sporadic colorectal cancer in the general population. Colonoscopy is the cornerstone for surveillance and management of dysplasia in these patients. There are several modalities to augment the quality of endoscopy for the better detection of dysplastic or neoplastic lesions, including the use of high-definition white-light exam and image-enhanced colonoscopy, which are described in this review. Clinical practice guidelines regarding surveillance strategies in UC have been put forth by various GI societies, and overall, there is agreement between them except for some differences, which we highlight in this article. These guidelines recommend that endoscopically detected dysplasia, if feasible, should be resected endoscopically. Advanced newer techniques, such as endoscopic mucosal resection and endoscopic submucosal dissection, have been utilized in the treatment of CAN. Surgery has traditionally been the mainstay of treating such advanced lesions, and in cases where endoscopic resection is not feasible, a proctocolectomy, followed by ileal pouch-anal anastomosis, is generally recommended. In this review we summarize the approach to surveillance for cancer and dysplasia in UC. We also highlight management strategies if dysplasia is detected.

1. Introduction

Colorectal cancer (CRC) is the third most common cancer and the second most common cause of cancer-related death in the United States [1]. In addition to human lives lost, CRC boasts a prominent financial burden of 11% of all cancer treatment costs and an annual price tag of 14.1 billion USD in national spending [2]. Approximately half of CRC cases are postulated to be preventable and/or manageable through risk modification and screening [3]. There are multiple modifiable risk factors related to the development of CRC. However, the presence of ulcerative colitis (UC) and the subsequent progression to colitis-associated neoplasia (CAN) pose unique challenges regarding dysplasia surveillance and management.

According to the Centers for Disease Control (CDC), the lifetime risk of CRC in the general US population is approximately 4% [3]. In contrast, the risk of CAN in patients with UC is estimated to be between 8% and 18% after 30 years of disease and may be 4 times higher for patients with comorbid primary sclerosing cholangitis (PSC) [4–7]. The association between UC and CAN is thought to be due to long-standing inflammation based on the observation that cancer-risk parallels disease severity and duration [8,9].

Colorectal Cancer: Molecular Mechanisms, Premalignant State and Its Prevention W. Schmiegel, J. Schölmerich, 1999-04-30 Colorectal cancer is one of the most common causes of tumour associated death in Western countries and its incidence has been increasing in recent decades The most important

determinant for the course of the disease is tumour stage at the time of diagnosis The detection of molecular changes in tumour tissue and in benign adenomatous polyps has improved our knowledge of colorectal carcinogenesis Diseases with a high risk for malignant transformation as well as family predisposition as an independent risk factor have been identified Furthermore dietary and environmental factors together with the intake of aspirin and other NSAIDs influence tumor development This implies new ways of specific testing for early diagnosis and new prevention strategies based on endoscopy and drug therapy The main topics of this book the proceedings of the international Falk Symposium No 109 held in Titisee Germany on October 14 15 1998 are molecular mechanisms premalignant state and prevention State of the art chapters deliver the latest scientific developments on every topic followed by more detailed chapters on specific items
