Cardiovascular Care in Patients With HIV Merle Myerson, Marshall J. Glesby, 2019-03-15 This book provides the most current overview of the evaluation and management of cardiovascular disease in people living with HIV/AIDS. The text assesses the risk factors associated with cardiovascular disease in HIV/AIDS patients and explores the most cutting edge ways to diagnose and treat the specific diseases that are most common for people living with HIV. This text takes a well rounded multidisciplinary approach that considers infectious disease and HIV specialists who may have little familiarity with the diagnosis and management of manifest CVD or risk factors as well as those in remote areas where providers may have little or no infrastructure to support optimal care for their patients. The text also serves cardiovascular specialists who may not have the expertise in HIV care to meet the unique needs of these patients. *Cardiovascular Care for the Patient Living with HIV* is the ultimate resource for not only all infectious disease and HIV specialists but also for cardiologists, neurologists, vascular surgeons, general practitioners, nurse practitioners, physician assistants, and all other medical professionals who care for people living with HIV.

Health Outcomes in a Foreign Land Bernard Kwabi-Addo, 2017-06-27 This stimulating volume uses multiple lenses to analyze the complex causes of health disparities affecting minorities in particular African Americans and explains how this knowledge can be used to reduce their destructive effects. Pinpointing genetic, non-genetic, and epigenetic factors underlying health conditions common to the population including heart disease, hypertension, diabetes, and cancer, the author traces intricate links among these factors in the current environmental and social context. The section on non-genetic factors in health disparities such as social determinants and health behaviors adds depth to the ongoing discourse on public health and health policy objectives. And the chapters on gene-environment interactions outline the vast potential for developing new multidisciplinary frontiers in shrinking health inequities and personalizing care. Included in the coverage: The African diaspora and disease-specific disparities; The genetic basis to health disparities; The role of epigenetics; Economic factors and health; Psychological issues and how they affect disparities; Gene-environment interactions in health disparities; Race: a biological or social concept; Compelling and accessible. *Health Outcomes in a Foreign Land* will challenge and inspire medical students, epidemiologists, public health professionals, biomedical research scientists, and social scientists to go farther in their work. A wider audience would include policymakers, government officials, nurses, physicians, lawyers, economists, community outreach investigators, and interested general readers.

Evidence-based Acupuncture Ping-chung Leung, Tang-yi Liu, 2012-11-29 Acupuncture has been an important branch of Traditional Chinese Medicine for over 3000 years and is the most popular practice among non-Chinese practitioners outside of China. In 1998, the United States National Institutes of Health (NIH) held a consensus conference and endorsed the practice of acupuncture as an effective pain control agent. Since then, acupuncture has become even more popular. Clinical practice is always an inviting form of research. In the field of acupuncture research, concentrates on the neurological pathways of the meridians and acupoints, the neurological

functional changes within the central nervous system and innovative devices being invented etc It appears that there will be a long way before firm explanations can be acquired for the explanation of the physiological effects of acupuncture The technique of acupuncture is easily acquired although the evidence of efficacy remains subjective Before the evidence can be sorted out through scientific explorations confidence on efficacy can rely only on literature search and sharing of expert experiences This is a user friendly book for all professionals practicing acupuncture The contents consist of all the popular areas of clinical application viz pain control and neuromuscular training Each chapter is composed of two parts clinical evidences as previously recorded in literature and personal experiences of the author Acupuncture practice requires a thorough knowledge of the treatment choices relevant to particular conditions as well as their modifications This book offers quick references for this purpose
