Dielectric Breakdown Of Solids:

Dielectric Breakdown of Solids Stanley Whitehead,1951 *Electrical Degradation and Breakdown in Polymers* Len A. Dissado,John C. Fothergill,1992 The book is in five parts Part I introduces the physical and chemical structure of polymers and their breakdown Part II reviews electrical degradation in polymers and Part III reviews conduction and deterministic breakdown in solids Part IV discusses the stochastic nature of break down from empirical and modelling viewpoints and Part V indicates practical implications and strategies for engineers Much of the discussion applies to non crystalline materials generally *The Theory of Dielectric Breakdown of Solids* John Joseph O'Dwyer,1964 *Dielectric Breakdown in Solids* United States. Army Ballistic Missile Agency,1974 **Dielectric Breakdown in Solids** Paul P. Budenstein,ARMY MISSILE RESEARCH DEVELOPMENT AND ENGINEERING LAB REDSTONE ARSENAL ALA GUIDANCE AND CONTROL DIRECTORATE.,AUBURN UNIV ALA.,1974 A theoretical model of dielectric breakdown in solids has been proposed by Budenstein In this model the breakdown process starts with the development of a critical local charge density This density in turn causes chemical bonds to be broken and leads to the formation of a high density gaseous plasma the conducting path for destructive breakdown The present work explores the magnitude of the critical charge density by comparison of the bonding energies of the H₂ H₂ H₂ and H₂ molecules An ab initio calculation of the ground state of the H₂ molecule is performed and is the major contribution of this work The implications of this calculation on the breakdown problem and on other problems are discussed **Dielectric breakdown of solids** S. Whitehead,1953 **Effects of Excess Charge Density on Dielectric Breakdown in Solids** Jack M Lloyd (Jr),Paul P. Budenstein,AUBURN UNIV ALA DEPT OF PHYSICS.,1977 After consideration of the available experimental evidence and an examination of the previously proposed models of electric breakdown in solid dielectrics it appears that the model proposed by Budenstein for the formation of a hot high pressure gas channel within the dielectric prior to breakdown conduction more nearly describes the conditions occurring during breakdown This paper considers the formation of a gas within a solid dielectric under high electrical stress A possible sequence of reactions in alkali halide materials is presented To provide further perspective on the energetics of bond disruption gas formation a calculation of the ground state energy of the doubly negative hydrogen molecular ion is made This calculation shows that this state is strongly repulsive and the calculation gives a scale of distance for electron interactions with molecular states The ground state energies of the neutral hydrogen molecule and the He He system are also calculated with the wavefunction chosen for the doubly negative ion as a check on the accuracy of the energy calculations and for comparison with the doubly negative ion energy The results of these calculations are applied to the breakdown problem to show that a localized excess charge density can cause bond disruption under the proper conditions and lead to the formation of a gas within the dielectric Author **Proceedings of First International Conference on Conduction and Breakdown in Solid Dielectrics, Université Paul Sabatier, Toulouse, France, July 4-8, 1983** ,1983 [The Theory of Electrical](#)
