

# The Digestive System

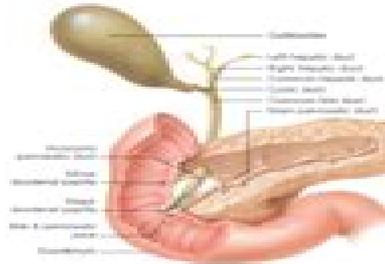

## What is the digestive system?

The digestive system, or gastrointestinal tract, is a complex of organs in which foods, beverages, and other nutrients are broken down into smaller molecules that can be absorbed into the bloodstream. The process begins in the mouth, where food is chewed and mixed with saliva. The resulting bolus is then swallowed and moves down the esophagus into the stomach. In the stomach, food is further broken down and mixed with gastric juices. The resulting chyme then moves into the small intestine, where most of the digestion and absorption of nutrients occurs. The large intestine then absorbs water and electrolytes from the remaining material, which is then excreted as feces.

## Liver, pancreas & gallbladder

The liver, pancreas, and gallbladder are accessory organs of the digestive system. The liver produces bile, which is stored in the gallbladder. The pancreas produces pancreatic juice, which is secreted into the small intestine. The gallbladder stores bile until it is needed to emulsify fats in the small intestine.

## Layers of large intestine

## Large intestine

The large intestine is the final part of the digestive system. It is responsible for absorbing water and electrolytes from the remaining material in the chyme. The large intestine is divided into the cecum, ascending colon, transverse colon, descending colon, sigmoid colon, and rectum.

## Peristaltic action

Peristaltic action is the process by which the digestive system moves food through the tract. It involves the contraction and relaxation of muscles in the wall of the digestive tract, creating a wave of pressure that pushes food forward.

## The mouth & salivary glands

The mouth is the starting point of the digestive system. Salivary glands, including the parotid, sublingual, and submandibular glands, produce saliva, which contains the enzyme amylase. Saliva helps to break down carbohydrates and lubricate the food for swallowing.

## The stomach

The stomach is a muscular organ that acts as a reservoir for food. It is responsible for the mechanical breakdown of food into smaller pieces and the chemical digestion of proteins. The stomach wall is composed of several layers, including the mucosa, submucosa, muscle, and serosa.

## Small intestine

The small intestine is the longest part of the digestive system. It is responsible for the majority of the digestion and absorption of nutrients. The small intestine is divided into the duodenum, jejunum, and ileum.

## Absorption

Absorption is the process by which nutrients are taken up by the cells of the digestive tract. The nutrients are then transported to the liver and other parts of the body. The small intestine is the primary site of absorption for most nutrients.

**The Digestive System** Margaret E. Smith, Dion G. Morton, 2011-11-18 This is an integrated textbook on the digestive system covering the anatomy physiology and biochemistry of the system all presented in a clinically relevant context appropriate for the first two years of the medical student course One of the seven volumes in the Systems of the Body series Concise text covers the core anatomy physiology and biochemistry in an integrated manner as required by system and problem based medical courses The basic science is presented in the clinical context in a way appropriate for the early part of the medical course

**Comparative Physiology of the Vertebrate Digestive System** C. Edward Stevens, Ian D. Hume, 2004-11-25 This book discusses the structural and functional characteristics of the digestive system and how these vary among vertebrates

The Digestive Tract of Cephalopods: at the Interface Between Physiology and Ecology Giovanna Ponte, Eduardo Almansa, Paul Andrews, 2019-03-25 Aristotle in the *Historia animalium* Book IV gives one of the earliest descriptions of the anatomy of the cephalopod digestive tract comparing it to that of other molluscs From dissections of cuttlefish several key features of the cephalopod digestive tract were described the beak teeth and radula tongue the passage of the oesophagus through the brain en route to the crop and stomach The stomach is described as having spiral convolutions like a trumpet snail shell suggesting that the structure described is actually the caecum The gut then turns anteriorly so that the anal opening is near the funnel leading a modern author to comment that they defaecate on their heads Leroi 2014 In the intervening two millennia research on the cephalopod digestive tract has been sporadic with much of the current knowledge arising from a series of studies in the 1950s to the 1970s by A M Bidder E Boucaud Camou R Boucher Rodoni and K Mangold which established the basic mechanisms of digestion and absorption e g Bidder 1950 Boucaud Camou et al 1976 The last 10 years has seen a resurgence of research on the digestive tract stimulated by interest cephalopods particularly *Octopus vulgaris* and *Sepia officinalis* as candidate species for aquaculture and the potential impact of climate change on cephalopod ecology Additionally the inclusion of cephalopods in the European Union legislation regulating scientific research has necessitated improved understanding of dietary requirements and metabolism as well as the development of methods to monitor digestive tract function to ensure optimal care and welfare in the laboratory Prompted by this resurgence of interest in the cephalopod digestive tract and an international workshop on the topic held in November 2015 we have collected a series of papers reflecting the current state of the art The seventeen papers in this book combine original research publications and reviews covering a diversity of topics that are grouped under four main themes reflecting key topics in the physiology and ecology of the cephalopod digestive tract feeding strategies early life stages and aquaculture anatomy and digestive physiology care and welfare This book provides a timely synthesis of ongoing research into the cephalopod digestive tract which we hope will stimulate further studies into this relatively neglected aspect of cephalopod biology

**Physiology and Pathophysiology of Digestion** D. Neil Granger, James D. Morris, Peter R. Kvietys, 2018-09-13 This collaboration of two physiologists and a gastroenterologist provides medical and graduate students medical and surgical residents and subspecialty fellows a comprehensive summary of digestive system physiology and addresses the pathophysiological processes that underlie some GI diseases The textual approach proceeds by organ instead of the traditional organization followed by other GI textbooks This approach lets the reader track the food bolus as it courses through the GI tract learning on the way each organ's physiologic functions as the bolus directly or indirectly contacts it The book is divided into three parts 1 Chapters 1 3 include coverage of basic concepts that pertain to all or most organs of the digestive system salivation chewing swallowing and esophageal function 2 Chapters 4 6 are focused on the major secretory organs stomach pancreas liver that assist in the assimilation of a meal and 3 Chapters 7 and 8 address the motor transport and digestive functions of the small and large intestines Each chapter includes its own pathophysiology and clinical correlation section that underscores the importance of the organ's normal function Physiology of the Digestive Tract Horace W. Davenport Ph.D., 1977 **Physiology of the Digestive Tract** Horace Willard Davenport, 1966 **Physiological Pharmaceutics** Neena Washington, Clive Washington, Clive Wilson, 2000-12-21 In recent years the emphasis in drug development has been the design of new delivery systems rather than new drugs It is the aim of innovative pharmaceutical scientists to design the new dosage forms to overcome the body's barrier mechanisms which have specifically evolved to exclude foreign material This book provides an integrated approach *Gastrointestinal Physiology* Menzibeya Osain Welcome, 2018-06-20 This book offers one of the most comprehensive reviews in the field of gastrointestinal GI physiology guiding readers on a journey through the complete digestive tract while also highlighting related organs and glandular systems It is not solely limited to organ system physiology and related disciplines like anatomy and histology but also examines the molecular and cellular processes that keep the digestive system running As such the book provides extensive information on the molecular cellular tissue organ and system levels of functions in the GI system Chapters on the roles of the gut as an endocrine exocrine and neural organ as well as its microbiome functions broaden readers understanding of the multi organ networks in the human body To help illustrate the interconnections between the physiological concepts principles and clinical presentations it outlines clinical examples such as pathologies that link basic science with clinical practice in special clinical correlates sections Covering both traditional and contemporary topics it is a valuable resource for biomedical students as well as healthcare and scientific professionals *Physiology of the Gastrointestinal Tract* Leonard R.
