Abstract

The chapter relates to the Image Processing Toolbox in MATLAB. We learn about its general information and some examples will be solved using it. After finishing this chapter, you can use MATLAB Image Processing Toolbox and write script for processing of images.

Keywords: MATLAB, digital, image, processing, Fundamental

1. Digital image processing

The image may be defined as a two-dimensional visual information that are stored and displayed. An image is created by photosensitive devices which capture the reflection light from two-dimensional surface of object in the three-dimensional real world (**Figure 1**). Each image has intensity or gray value in $x - y$ coordinate plane. If it is finite and discrete quantities, image is called digital image. In **Figure 2**, some digital images are shown.

Digital image processing (DIP) has the different techniques for processing of digital images. DIP has been applying many fields with technological advances, such as Medicine, Geographical Information Technologies, Space Sciences, Military Applications, Security, Industrial Applications.

1.1. Pixel

Pixels, which are called pel or picture elements, may be defined as the smallest addressable element in the digital image. Pixels of a color image have Red, Green, and Blue gray values (Figure 3).

<u>Image Processing</u> PROF. Pooja SAXENA,PROF. Vishnu SAXENA,2017-04 Digital signal processing is the subject of engineering in which we process the digital signal with the help of computer perform some mathematical operation upon signal and extract desired information from the signal Digital Image processing is the branch of digital signal processing in which first we convert an image into the digital signal with the help of a digital camera and computer then store this image into a computer Once image is stored into the computer then it is converted into the two dimensional matrix of numbers Now we can perform any mathematical operation with these numbers and can modify or transform these numbers in to the desired way and can extract an information This process of modifying or extracting the desired information from digital image is called digital image processing
