Roles of Computer in Measurement and Process Control

- Computers are now extensively used for measurement and control in process and manufacturing industries. It has brought **new possibilities and new challenges** to measurement and control engineers.
- The basic objective of computer based measurement and control is to acquire the information from field devices (input), and compute a logical decision to manipulate the material and energy flow of given process in a desired way to get optimal output.
- The expectations from a process computer compared to a general purpose computer is primarily in terms of **response time, computing power, flexibility and fault tolerance**, which are need to be rigid and reliable.
- The control of the process has to be carried out in real-time.

Difficulties Encountered

- Mostly for process computers it is difficult to provide a solution to the problem of complexity, flexibility, and geographical separation of process elements (plant equipment) which are to be operated in a controlled manner.
