Dynamics Of Stellar Systems:

Dynamics of Stellar Systems K. F. Ogorodnikov, 2016-10-13 *Dynamics of Stellar Systems* focuses on the theoretical problems in stellar dynamics. The book first offers information on stellar dynamics including historical development, fundamentals of synthetic method and value of stellar dynamics. The text discusses the fundamental concepts of stellar statistics. Properties of univariate distribution functions, multivariate distribution functions and statistical properties of stars are explained. The text then describes the elementary theory of galactic rotation and irregular forces in stellar systems. The text also tackles statistical stellar dynamics of neglecting encounters. Considerations include Boltzmann equation in curvilinear coordinates, importance of using one valued integrals of the motion and fundamental differential equation of stellar dynamics. The book also underscores the regular orbit of stars and dynamics of centroids. The text describes the dynamics of spherical stellar and rotating stellar systems. The theory of polytropic spheres, basic equations for spherical systems, masses and rotation of galaxies and boundaries of galaxies are discussed. The text is highly recommended for readers interested in stellar dynamics. *Dynamics of Stellar Systems* International Astronomical Union. Symposium, 1975

Dynamics of Stellar System International Astronomical Union, 1975-09-30 The idea of holding this Symposium has its origin in a conversation with G Con to poulos during the winter of 1973. It was then clear that the progress realized in Stellar Dynamics since the Thessaloniki symposium had given a new shape to the field. Other meetings such as the C N R S colloquium held in Paris in 1967 or the LA V colloquium held in Cambridge England in 1970 had in the meantime given opportunities to review the advances achieved in several branches of this field. We thought that time had come to organize a general confrontation of the new results obtained in the approach of the gravitational N body problem by different methods in the investigation of spherical and flattened systems in the comparisons with observations and in more theoretical speculations on orbits, integrals of motion, dense nuclei or relativistic stellar dynamics. Things were made easy by the support of Commissions 33 and 37 which welcomed the proposition and by I R King who accepted to act as Chairman of the Scientific Organizing Committee. The final decision to meet in Besançon was taken during the XVth General Assembly of the IAU in Sydney in August 1973. The members of the Organizing Committee were I R King, Chairman, G Con topoulos, A Hayli, M Henon, G Hori, D Lynden Bell, L Perek, L Spitzer, R Wielen, Ya Zel dovich, while the members of the Local Committee were A *Dynamics of stellar systems, tr* K.
