Early Humans:

Early Humans and Their World Bo Gräslund, 2005-10-11 Summarizing modern research on early hominid evolution from the apes six million years ago to the emergence of modern humans this book is the first to present a synthetic discussion of many aspects of early human life

The First Human Ann Gibbons, 2007-04-10 In this dynamic account award winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions When and where was the dawn of humankind Following four intensely competitive international teams of scientists in a heated race to find the missing link the fossil of the earliest human ancestor Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters Tim White the irreverent Californian who discovered the partial skeleton of a primate that lived 4 4 million years ago in Ethiopia French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago and two other groups one led by zoologist Meave Leakey the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut who enter the race with landmark discoveries of their own Through scrupulous research and vivid first person reporting *The First Human* reveals the perils and the promises of fossil hunting on a grand competitive scale

Life on Earth The Diagram Group, 2004 A guide to the earliest humans including what defines a human how humans developed over time what prehistoric humans daily lives were like and how scientists have learned about them

A Pocket History of Human Evolution Silvana Condemi, François Savatier, 2019-11-01 Why aren't we more like other apes How did we win the evolutionary race Find out how wise Homo sapiens really are Prehistory has never been more exciting New discoveries are overturning long held theories left and right Stone tools in Australia date back 65 000 years a time when we once thought the first Sapiens had barely left Africa DNA sequencing has unearthed a new hominid group the Denisovans and confirmed that crossbreeding with them and Neanderthals made Homo sapiens who we are today A Pocket History of Human Evolution brings us up to date on the exploits of all our ancient relatives Paleoanthropologist Silvana Condemi and science journalist François Savatier consider what accelerated our evolution Was it tools our large brains language empathy or something else entirely And why are we the sole survivors among many early bipedal humans Their conclusions reveal the various ways ancient humans live on today from gossip as modern grooming to our gendered division of labor and what the future might hold for our strange and unique species

The First Humans Frederick E. Grine, John G. Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless Most deal with the origin and early evolution of our own genus something about which we should care Some of these issues pertain to taxonomy and systematics How many species of Homo were there in the Pliocene and Pleistocene How do we identify the earliest members the genus Homo If there is more than one Pliocene Pleistocene species how do they relate to one another and where and when did they evolve Other issues relate to questions about body size proportions and the functional adaptations of the locomotor skeleton When did the human postcranial

Bauplan evolve and for what reasons What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to Homo habilis and Homo erectus Still other issues relate to growth development and life history strategies and the biological and archeological evidence for diet and behavior in early Homo It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of Homo Still other issues relate to the environmental and climatic context in which this genus evolved
