

Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. The energy consumption of data centers is expected to reach 100 TWh by 2020, which is equivalent to the energy consumption of the entire United States in 2008.

Moore's Law states that the number of transistors on a microchip doubles every two years, which has led to a rapid increase in the performance of microprocessors. However, this has also led to a rapid increase in energy consumption, which is a major concern for data centers and cloud providers.

Alternative Computing Architectures

Quantum Computing

Quantum computing is a type of computing that uses the principles of quantum mechanics to perform calculations. It is expected to be able to solve problems that are currently intractable for classical computers.

Quantum computing is still in the early stages of development, but it is expected to have a major impact on data centers and cloud providers in the future.

Neuromorphic Computing

Neuromorphic computing is a type of computing that is inspired by the structure and function of the human brain. It is expected to be able to perform tasks that are currently difficult for classical computers.

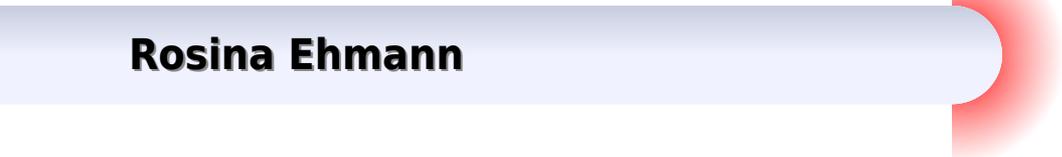

Neuromorphic computing is still in the early stages of development, but it is expected to have a major impact on data centers and cloud providers in the future.
