**Textbook of Obesity** Sharon R. Akabas, Sally Ann Lederman, Barbara J. Moore, 2012-03-20 Textbook of Obesity is designed to cover all of the essential elements concerning the etiology prevention and treatment of obesity suitable for students in nutrition dietetics and health science courses Providing core knowledge for students is an essential and urgent requirement to ensure that those graduating will be properly equipped to deal with the high prevalence of overweight and obesity currently affecting almost two thirds of the population of the USA and with prevalence in much of the rest of the world rapidly catching up This landmark text is organized into 5 parts comprising 27 chapters each carefully written in a user friendly style by experts in the area Part I helps the reader to understand the scope and complexity of the problem of obesity Part II focuses on obesity etiology Part III examines the health consequences of obesity for both children and adults Part IV discusses the challenge of assessing obesity in humans and offers insights into community factors that influence the risk of obesity Finally Part V dedicates 13 chapters to a discussion of a wide variety of obesity prevention and treatment interventions that are currently in use Textbook of Obesity is an essential purchase for students and the many health professionals dealing with obesity on a day to day basis A dedicated companion website features an extensive bank of questions and answers for readers to test their understanding and all of the book s illustrations for instructors to download [www.wiley.com/go/akabas/obesity](http://www.wiley.com/go/akabas/obesity) **Official Gazette of the United States Patent and Trademark Office**, 2004

*CD-ROMs in Print*, 2002 **Hi Fi/stereo Review**, 1996 *Project SHAPE* Guadalupe Xochitl Ayala, 2002 The increasing prevalence of obesity and chronic conditions are often attributed to increases in energy intake However the scientific validity of this relationship is threatened by the rate of low energy reporting associated with dietary assessment One of the goals of this study was to address the underreporting problem by improving accuracy in portion estimation and energy intake following a brief computer or group intervention on portion estimation The primary outcomes of interest included estimation of real foods and food models and accuracy of energy intake using a 24 hour dietary recall and two food records Secondary outcomes included self efficacy knowledge of portion size information and social desirability Repeated measures MANOVA were used to examine changes in portion estimation skills and accuracy of energy intake between baseline and post intervention and as a function of the intervention A convenience sample of 76 women was recruited interviewed at baseline randomly assigned to one of three conditions and then assessed two weeks post intervention The baseline and post intervention interviews consisted of a survey real and plastic food model portion size tests one 24 hour dietary recall two days of food records and assessment of height and weight Participants assigned to the intervention conditions group or computer based received one hour of training Results indicated that the intervention was not effective in improving real food portion size estimation abilities Women were observed making greater estimation errors at post intervention compared with baseline Estimation errors were greater with amorphous foods compared with solids and liquids The intervention was

effective in improving estimation errors on the food model test improving self efficacy and advancing knowledge of portion size information Accuracy of energy intake did not improve between baseline and post intervention or as a function of the intervention However social desirability was found to be associated with energy intake In addition the number of low energy reporters decreased between baseline and post intervention among participants in the group condition Nevertheless the prevalence of low energy reporting in this sample was very high Further research is needed to develop easily transportable interventions that will improve accuracy of energy reporting and portion estimation skills Interventions delivered by computer may need to be designed to provide more opportunities for multiple sensory interactions
