## **Basement Correlation Across The North Atlantic:**

**Basement Correlation Across the North Atlantic** Jean-Pierre Lefort, 2012-12-06 Major structural features are used in this study to reconstruct the links which existed between North America Europe and Africa before the opening of the North Atlantic Ocean The synthesis of geophysical and geochemical data as well as geological observations allows the recognition of the original geometry of the Grenvillian Cadomian Caledonian Ligerian Acadian and Hercynian foldbelts and the identification of ancient plate sutures The reader will find a wealth of information based not only on the English but also on the French and Spanish literature thus opening less known results to the international community *Geology of the Appalachian—Caledonian Orogen in Canada and Greenland* Harold Williams, 1995 This volume focuses on the Canadian Appalachian region The chapter on the East Greenland Caledonides stands alone and there is no attempt to integrate the geological accounts of the two far removed regions Rocks of the Canadian Appalachian region are described under four broad temporal divisions lower Paleozoic and older middle Paleozoic upper Paleozoic and Mesozoic The rocks of these temporal divisions define geographic zones belts basins and graben respectively The area is of special interest because so many modern concepts of mountain building are based on Appalachian rocks structures *Geology and Resource Potential of the Congo Basin* Maarten J. de Wit, François Guillocheau, Michiel C. J. de Wit, 2015-01-02 This book summarizes the geomorphology geology geochronology geophysics and mineral resources of the Congo Basin one of the world's most enigmatic and poorly understood major intra continental sedimentary basins and its flanking areas of Central Africa It provides an up to date analysis of the large region's origin and evolution The book's nineteen chapters take the reader through the entire basement history as well as the Basin's ca 700 million years of cover sequences Starting from its Archean cratons and Proterozoic mobile belts and proceeding through the Phanerozoic sequences including the most recent Cenozoic successions the book also explores the present drainage systems and the subtle but complex topography of the Congo Basin It also presents and evaluates new basin models and related dynamic processes as well as revised correlation schemes with its Gondwana counterparts in South America all of which provide key insights into its rich diamond deposits and other mineral wealth which are documented in the final chapters A specific feature of this book is its synthesis performed by teams of active experts of a vast amount of geoscientific data previously only recorded in research reports company reports survey bulletins and scattered journal articles and books The sheer size of the Congo Basin ca 1.8 million km<sup>2</sup> or just under half the area of the EU and Central Africa some 7 million km<sup>2</sup> or more than 70% of the area of the USA will make this a sought after source of information and inspiration on this unique region *Structure and Evolution of Laurussian Orogens in Europe and North America from Geophysical Investigations* W. Ben-Mansour, C. Schiffer, S. Gradmann, 2026-02-17 This volume presents geophysical studies and reviews of the major Paleozoic orogenies that shaped Laurussia the supercontinent that existed between 550 and 300 Ma ago and later amalgamated with Gondwana to form Pangaea Several aspects of these orogenies are

still debated and are addressed in this volume by presenting new geophysical data reviewing existing studies and synthesizing insights into Laurussia's Paleozoic orogenic evolution. Specific topics here are the mechanism of support of the present day topography, the three dimensional architecture of accreted terranes, the role of inheritance of tectonic structures in the evolution of orogens and passive margins or the relationship between different orogenic episodes. This volume evaluates the strengths and limitations of geophysical methods, explores their integration with geological data and identifies future research priorities to further illuminate the processes that shaped Laurussia and its transition into Pangaea.

Geological Setting, Palaeoenvironment and Archaeology of the Red Sea Najeeb M.A. Rasul, Ian C.F. Stewart, 2018-12-05

This book gathers invited contributions from active researchers to provide an up to date overview of the geological setting of the Red Sea. It discusses aspects ranging from historical information to modern research in the Red Sea and presents findings from rapidly advancing emerging fields. This semi enclosed young ocean basin provides a unique opportunity to study the development of passive continental margins in order to examine the current status of that region. In addition to studies on the Sea itself it includes those from related fields on the littoral zone. The book is of interest to geoscientists and non specialists alike.
