A Programmed Introduction to Gas-Liquid Chromatography James B. Pattison,1973 A Programmed Introduction to Gas-liquid Chromatography James Bulmer Pattison,1973 *Chromatographic Methods* R. Stock,C. B. F. Rice,2013-11-11

Classification of chromatographic methods Chromatography is the name given to a particular family of separation techniques of great effectiveness The original method was described in 1903 by Tswett who used it for the separation of coloured substances and the name chromatog raphy stems from this However the limitation to coloured compounds never really obtained and most chromatographic separations are nowadays performed on mixtures of colourless substances including gases Like fractional distillation chromatography relies on the relative movement of two phases but in chromatography one is fixed and is known as the stationary phase the other is known as the mobile phase Chromatographic methods may be classified first according to the nature of the mobile phase and second according to the nature of the stationary phase The mobile phase may be a liquid or a gas and the stationary phase may be a solid or a liquid There are thus four main sub divisions of the chromatographic process as set out in Table 1 1 The system is called adsorption chromatography if the stationary phase is a solid and partition chromatography if it is a liquid

A Programmed Introduction to Gas-liquid Chromatography James Bulmer Pattison,1973 *More Spectroscopic Problems in Organic Chemistry* Archibald James Baker,1975 Fundamentals of Biochemical Pharmacology Z. M. Bacq,2014-05-17

Fundamentals of Biochemical Pharmacology explains the molecular aspects of drugs and the changes in bio chemical systems The cellular movements that result from such changes are also evaluated Biochemical lesion is extensively defined in the book A discussion on electromagnetic radiation is also provided A chapter of the book is devoted to the principles of electronic and nuclear magnetic resonance The principles and applications of mass spectrometry and combined gas chromatography are then discussed The scientific advances made with the use of immunological methods are the focus of a section of the book Another section provides an introduction to the kinetic properties of reactions made by enzymes The process called homogenization is clearly explained along with a discussion on the use of electron microscopy Autoradiography shows the distribution of compounds at the subcellular level The theoretical background of molecular spectroscopy is presented completely The book is intended for chemists biochemists physicists micro biologists zoologists and botanists

Laboratory Handbook of Chromatographic and Allied Methods Otakar Mikeš,1979 *Handbook of Essential Oils* K. Husnu Can Baser, Gerhard Buchbauer,2015-10-27

The second edition of Handbook of Essential Oils Science Technology and Applications provides a much needed compilation of information related to the development use and marketing of essential oils It focuses particularly on the chemistry pharmacology and biological activities of essential oils with contributions from a worldwide group of
