On-going research on outcome-based assessment processes conducted by a multidisciplinary team from five major universities is described. The research has been guided, in large part, by ABET's innovative criteria—EC 2000. The paper provides examples of several by-products of this research that have been applied in the engineering education environment. The reader is exposed to strategies for objective setting, an attribute database for use in defining student learning outcomes, and examples of technology-enabled systems that provide assessments with timely results. Specific assessment methodologies currently embedded in triangulation and validation experiments are described.

INTRODUCTION

THIS PAPER describes one approach to addressing the outcome assessment requirements of ABET's (Accreditation Board of Engineering and Technology) innovative criteria—EC 2000 [1], whose outcome-based criteria are now required for all 1600 plus US engineering programs. (ABET accredits individual programs rather than the entire college; hence, each program in the engineering college must seek separate accreditation and institute its own outcome oriented process.) As evidenced by this special issue of the *International Journal of Engineering Education*, assessment and EC 2000 have also attracted considerable international interest. As a result, US engineering educators have become especially interested in assessment issues in general and successful applications in particular.

Hence, in addition to presenting a way to prepare for EC 2000, we discuss several methodologies that we either have applied or are in the process of applying in the engineering education environment. We also describe our efforts in expanding the 'assessment toolkit' as part of a five-university collaborative research project:

- Colorado School of Mines (CSM)
- Columbia University (CU)
- University of Pittsburgh (UP)
- Rose-Hulman Institute of Technology (RHIT)
- University of Washington (UW).

EC 2000 is more than outcome assessment. It requires the implementation of a closed-loop

system. To do this, engineering educators must first establish program and learning objectives, specify measurable outcomes, typically in terms of desired outcome attributes, and use the resultant information to make real improvements.

A SYSTEMS-BASED ASSESSMENT PROCESS

To provide a comprehensive approach for EC 2000, we propose an underlying model that views outcome assessment as a systems-based process [2]. This process begins by defining program and course objectives in terms of student learning outcomes. It is only after these have been clearly defined that appropriate assessment methodologies can be selected. These methods then are implemented and data collection commences. The final phase of this systems process is the reduction of collected data into information that clearly informs academic decisions and programmatic improvements. This process is continuous in nature with feedback from each phase influencing future actions.

To implement such a system, we further propose that engineering educators complete a series of five tasks that might entail:

1. Creating a structured process to facilitate objective setting and outcome definition at the program and course level.
2. Defining a comprehensive listing of measurable attributes for each of the desired outcomes. (Criteria 3 of EC 2000 prescribes a minimum set of eleven learning outcomes, often referred to as 3a–k.)

* Accepted 14 September 2001.

Illegal Beings Kerry Lynn Macintosh,2005-08-01 Many people think human reproductive cloning should be a crime In America some states have already outlawed cloning and Congress is working to enact a national ban Meanwhile scientific research continues both in America and abroad and soon reproductive cloning may become possible If that happens cloning cannot be stopped Infertile couples and others will choose to have babies through cloning even if they have to break the law This book explains that the most common objections to cloning are false or exaggerated The objections reflect and inspire unjustified stereotypes about human clones and anti cloning laws reinforce these stereotypes and stigmatize human clones as subhuman and unworthy of existence This injures not only human clones but also the egalitarianism upon which our society is based Applying the same reasoning used to invalidate racial segregation this book argues that anti cloning laws violate the equal protection guarantee and are unconstitutional **Tort Law** Allen P.
