Anthropological Perspectives on Technology Michael B. Schiffer,2001 These fourteen original essays accept a dual premise technology pervades and is embedded in all human activities By taking that approach studies of technology address two questions central in anthropological and archaeological research today accounting for variability and change These diverse yet interrelated chapters show that to understand human lives researchers must deal with the material world that all peoples create and inhabit Therefore an anthropology of technology is not a separate discrete inquiry instead it is a way to connect how people make and use things to any activity studied ranging from religion to enculturation to communication to art Each contributor discusses theories and methods and

also offers a substantial case study These detailed inquiries span human societies from the Paleolithic to the computer age By moving beyond the usual approach of examining ancient technologies particularly chipped stone and low fired ceramics this volume probes for the construction of meaning in the material world across millennia The authors of these essays find technology to be an inclusive and flexible topic that merges with studies of everything else in human activity A provocative and powerful discussion of the role of technology in human cultures At a time when archaeology has become less focused on theory and archaeology and social anthropology seem to fracture farther and farther apart the book is a breath of fresh air

Kutay,Elyssebeth Leigh,Juliana Kaya Prpic,Lyndon Ormond-Parker,2022-09-28 For many millennia Indigenous Australians have been engineering the landscape using sophisticated technological and philosophical knowledge systems in a deliberate response to changing social and environmental circumstances These knowledge systems integrate profound understanding of country and bring together knowledge of the topography and geology of the landscape its natural cycles and ecological systems its hydrological systems and natural resources including fauna and flora This enables people to manage resources sustainably and reliably and testifies to a developed contextualised knowledge system and to a society with agency and the capability to maintain and refine accumulated knowledge and material processes This book is a recognition and acknowledgement of the ingenuity of Indigenous engineering which is grounded in philosophical principles values and practices that emphasise sustainability reciprocity respect and diversity and often presents a much needed challenge to a Western engineering worldview Each chapter is written by a team of authors combining Indigenous knowledge skills and academic expertise providing examples of collaboration at the intersection of Western and Indigenous engineering principles sharing old and new knowledges and skills These varied approaches demonstrate ways to integrate Indigenous knowledges into the curricula for Australian engineering degrees in line with the Australian Council of Engineering Deans Position Statement on Embedding Aboriginal and Torres Strait Islander perspectives into the engineering curriculum first published in 2017 *Watercraft* Alex Barlow,1999 This book will provide school students with valuable insights into the Aboriginal and Torres Strait Islander way of life their culture and the respect they have for their environment

Sentient Archaeologies Courtney Nimura, Rebecca O'Sullivan, Richard Bradley, 2023-07-15 Archaeology in the past century has seen a major shift from theoretical frameworks that treat the remains of past societies as static snapshots of particular moments in time to interpretations that prioritize change and variability. Though established analytical concepts such as typology remain key parts of the archaeologist's investigative toolkit, data gathering strategies and interpretative frameworks have become infused progressively with the concept that archaeology is living in the sense of both the objects of study and the discipline as a whole. The significance for the field is that researchers across the world are integrating ideas informed by relational epistemologies and mutually constructive ontologies into their work from the initial stage of project design all the way down to post-excavation interpretation. This volume showcases examples of such work highlighting the utility of these ideas to exploring material both old and new. The illuminating research and novel explanations presented contribute to resolving long-standing problems in regional archaeologies across Africa, Asia, Australia, Europe, and Oceania. In this way, this volume reinvigorates approaches taken towards older material but also acts as a springboard for future innovative discussions of theory in archaeology and related disciplines. Paleoamerican Origins Robson Bonnicksen, 2005 *Paleoamerican Origins Beyond Clovis* presents 23 up-to-date syntheses of important topics surrounding the debate over the initial prehistoric colonization of the Americas. These papers are written by some of the foremost authorities who are on the trail of the first Americans. The papers are written by some of the foremost authorities who are on the trail of the first Americans. The papers in this volume include a discussion of the archaeological evidence for Clovis and Pre-Clovis sites in North America (11 papers) and South America (2 papers). In addition, papers on the genetic evidence (2 papers) and skeletal evidence (4 papers) provide insights into the origins of the first Americans. Additional papers include ideas on the changing perceptions of Paleoamerican prehistory, public policy and science, and a comprehensive concluding synthesis.
