**PVC Technology** M.V. Titow, 2012-12-06 This book continues the tradition of the first two editions of the late W S Penn s original PVC Technology and the extensively revised third 1971 edition prepared by myself and B J Lanham In the present edition the original general format and the arrangement of chapters have been largely preserved but virtually nothing now remains of Penn s own text a part of the contents is based on material from the 1971 TitowLanham version revised updated and mainly rewritten the rest is new including inter alia several chapters specially contributed by experts from the plastics industry in the UK and Europe The section listing international ISO and national BS ASTM and DIN standards relevant to PVC which was first introduced as Appendix 1 in the 1971 edition proved a popular feature it has now been brought up to date and

considerably extended Two further appendices provide respectively comprehensive unit conversion tables with additional information on some of the most frequently encountered units and the SI units and a list of many properties of interest in PVC materials with definitions typical numerical values and references to relevant standard test methods For various reasons work on this edition involved more than the usual quota of problems I am truly grateful to the Publisher's Managing Editor Mr G B Olley for his understanding patience unfailing courtesy and friendly encouragement

**Developments in Plastics Technology—4** A. Whelan, J.P. Goff, 2012-12-06 Because of the sheer size and scope of the plastics industry the title *Developments in Plastics Technology* now covers an incredibly wide range of subjects or topics No single volume can survey the whole field in any depth and what follows is therefore a series of chapters on selected topics The topics were selected by us the editors because of their immediate relevance to the plastics industry When one considers the advancements of the plastics processing machinery in terms of its speed of operation and conciseness of control it was felt that several chapters should be included which related to the types of control systems used and the correct usage of hydraulics The importance of using cellular rubber modified and engineering type plastics has had a major impact on the plastics industry and therefore a chapter on each of these subjects has been included The two remaining chapters are on the characterisation and behaviour of polymer structures both subjects again being of current academic or industrial interest Each of the contributions was written by a specialist in that field and to them all we the editors extend our heartfelt thanks as writing a contribution for a book such as this while doing a full time job is no easy task
