mathematical concepts and techniques right where they need them Checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book to reinforce the main take home messages in each section The coupling of the broad coverage of the subject with a structure and use of pedagogy that is even more innovative will ensure Atkins Physical Chemistry remains the textbook of choice for studying physical chemistry Materials Handbook François Cardarelli,2018-07-09 The unique and practical Materials Handbook third edition provides quick and easy access to the physical and chemical properties of very many classes of materials Its coverage has been expanded to include whole new families of materials such as minor metals ferroalloys nuclear materials food natural oils fats resins and waxes Many of the existing families notably the metals gases liquids minerals rocks soils polymers and fuels are broadened and refined with new material and up to date information Several of the larger tables of data are expanded and new ones added Particular emphasis is placed on the properties of common industrial materials in each class After a chapter introducing some general properties of materials each of twenty four classes of materials receives attention in its own chapter The health and safety issues connected with the use and handling of industrial materials are included Detailed appendices provide additional information on subjects as diverse as crystallography spectroscopy thermochemical data analytical chemistry corrosion resistance and economic data for industrial and hazardous materials Specific further reading sections and a general bibliography round out this comprehensive guide The index and tabular format of the book makes light work of extracting what the reader needs to know from the wealth of factual information within these covers Dr Fran ois Cardarelli has spent many years compiling and editing materials data His professional expertise and experience combine to make this handbook an indispensable reference tool for scientists and engineers working in numerous fields ranging from chemical to nuclear engineering Particular emphasis is placed on the properties of common industrial materials in each class After a chapter introducing some general properties of materials materials are classified as follows ferrous metals and their alloys ferroalloys common nonferrous metals less common metals minor metals semiconductors and superconductors magnetic materials insulators and dielectrics miscellaneous electrical materials ceramics refractories and glasses polymers and elastomers minerals ores and gemstones rocks and meteorites soils and fertilizers construction materials timbers and woods fuels propellants and explosives composite materials gases liquids food oils resin and waxes nuclear materials food materials
