

Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. The energy consumption of a data center is a function of the number of servers, the power consumption of each server, and the efficiency of the power supply units (PSUs).

Moore's Law states that the number of transistors on a microchip doubles approximately every two years, though the rate of increase has slowed in recent years. This has led to a significant increase in the energy consumption of microprocessors, which is a major concern for data centers and cloud providers.
