When multiple forces act on an object, they combine to determine the object's acceleration. Understanding how forces and acceleration combine to determine an object's motion is a key concept in physics. This worksheet will help you understand how forces and acceleration combine to determine an object's motion.</p> <p>Newton's second law states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force on an object increases, the acceleration will also increase, and if the mass of the object increases, the acceleration will decrease.</p> <p>Forces can also interact to cause an object to change its motion. For example, if a net force acts on an object, it will cause the object to accelerate. This means that the object's velocity will change over time. The direction of the acceleration will depend on the direction of the net force. If the net force is in the same direction as the object's motion, the object will speed up. If the net force is in the opposite direction, the object will slow down. If the net force is perpendicular to the object's motion, the object will change direction.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>Which of the following is NOT a type of contact force?             <ol style="list-style-type: none"> <li>Friction</li> <li>Spring</li> <li>Gravity</li> <li>Normal</li> </ol> </li> <li>Which of the following is NOT a type of contact force?             <ol style="list-style-type: none"> <li>Friction</li> <li>Spring</li> <li>Gravity</li> <li>Normal</li> </ol> </li> <li>Which of the following is NOT a type of contact force?             <ol style="list-style-type: none"> <li>Friction</li> <li>Spring</li> <li>Gravity</li> <li>Normal</li> </ol> </li> <li>Which of the following is NOT a type of contact force?             <ol style="list-style-type: none"> <li>Friction</li> <li>Spring</li> <li>Gravity</li> <li>Normal</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
