Airplane Flight Dynamics Automat Part1:

Robust Multivariable Flight Control Richard J. Adams, James M. Buffington, Andrew G. Sparks, Siva S. Banda, 2012-12-06
Manual flight control system design for fighter aircraft is one of the most demanding problems in automatic control. Fighter aircraft dynamics generally have highly coupled uncertain and nonlinear dynamics. Multivariable control design techniques offer a solution to this problem. Robust Multivariable Flight Control provides the background theory and examples for full envelope manual flight control system design. It gives a versatile framework for the application of advanced multivariable control theory to aircraft control problems. Two design case studies are presented for the manual flight control of lateral directional axes of the VISTA F 16 test vehicle and an F 18 thrust vectoring system. They demonstrate the interplay between theory and the physical features of the systems.

Airplane Flight Dynamics and Automatic Flight Controls Jan Roskam, 1998. In this part exhaustive coverage is provided of the methods for analysis and synthesis of automatic flight control systems using classical control theory. This widely used book has been updated with the latest software methods. Throughout this text the practical design applications of the theory are stressed with many examples and illustrations. Aircraft stability and control characteristics are all heavily regulated by civil as well as by military airworthiness authorities for safety reasons. The role of these safety regulations in the application of the theory is therefore stressed throughout.

Airplane Flight Dynamics Automatic Flight Controls Part II is an essential reference for all aeronautical engineers working in the area of stability and control regardless of experience levels. The book minimizes reader confusion through a systematic progression of fundamentals. Elastic airplane stability and control coefficients and derivatives. Method for determining the equilibrium and manufacturing shape of an elastic airplane. Subsonic and supersonic numerical examples of aeroelasticity effects on stability control derivatives. Bode and root locus plots with open and closed loop airplane applications and coverage of inverse applications. Stability augmentation systems pitch dampers yaw dampers and roll dampers. Synthesis concepts of automatic flight control modes control stick steering auto pilot hold speed control navigation and automatic landing. Digital control systems using classical control theory applications with Z transforms. Applications of classical control theory. Human pilot transfer functions. Descriptive editor.
