Bioactive Carbohydrate Polymers:

Bioactive Carbohydrate Polymers Berit S. Paulsen, 2013-03-09 *Bioactive Carbohydrate Polymers* is probably the first book dealing with the latest in the field of polysaccharides and related products and their biological activities especially the immunological effects. The different chapters describe the structure and bioactivity of polysaccharides from plants used in traditional medicine in different parts of the world especially China, Japan and Europe. The focus of the book is on immunologically active plant and seaweed polysaccharides, pharmacological activities of sulphated polysaccharides of animal and seaweed origin and on possible activities of polysaccharides in our food. Methods for isolation and characterisation of the polymers with chemical and enzymatic methods is covered as well as discussions on the different biological test systems and the information they provide. This book will be useful to scientists and postgraduate students working with polysaccharides and their possible uses and should be of interest for people working in the areas of chemistry, biology, pharmacy and medicine.

Handbook of Carbohydrate Polymers Ryouichi Ito, Youta Matsuo, 2010 Carbohydrates play an important role in many biological and biochemical processes including the fertilisation, cell differentiation and maturation, protein folding and degradation. Carbohydrate polymers covers the study and exploitation of carbohydrate polymers which have current or potential industrial application in areas such as food, textiles, paper, wood, adhesives, biodegradables, biorefining, pharmaceuticals and oil recovery. This book focuses on recent developments on carbohydrate binding module (CBM) applications in the biomedical, biological and biotechnological fields. Furthermore, polysaccharides are complex carbohydrates that are made up of chains of monosaccharide units linked by glycosidic bonds. This book reviews the literature on fibres spun from several polysaccharides and fibre spinning techniques including both conventional fibre spinning methods and electrospinning. Resulting fibre properties and prospective applications are discussed. This book also reviews research on polysaccharide film formation and characteristics, analysed mechanical and barrier properties of polysaccharide based films, summarises applications of polysaccharide films in food products and makes conclusions as to the status of polysaccharide films and their future developmental direction. Other chapters in this book examine the pathways leading to the production of bioactive oligosaccharides that have biotechnological applications. The current progress in the development of marine carbohydrates into nutraceuticals and their applications are explored as well.
