Biochemical Preparations Volume 12:

Preparation Technology and Pharmacology of Biological Drugs Cheng-Hao Jin, 2021-04-07 Based on modern life science biological drugs combine advanced engineering technology and scientific principles of other basic disciplines and transform organisms or process biological raw materials according to leading designs Biopharmaceutical raw materials are mainly natural biological materials including microorganisms human body animals plants Marine organisms and so on With the development of biotechnology purposeful artificial biological raw materials have become the main source of biopharmaceutical raw materials Biological drugs are characterized by high pharmacological activity small toxic and side effects and high nutritional value Biological drugs mainly include proteins nucleic acids carbohydrates lipids and so on The constituent units of these substances are amino acids nucleotides monosaccharides fatty acids etc which are not only harmless to the human body but also important nutrients Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1971 Plant Carbohydrates I F.A. Loewus, W. Tanner, 2012-12-06 The essential features of constitution configuration and conformation in carbohydrate chemistry so well established in the first half of this century had yet to be exploited by those concerned with biochemical and physiological processes in plants when the original Encyclopedia appeared Two outstanding developments discovery of sugar nucleotides and the advent of chromatography brought together the insight and a means of probing complexities inherent in plant carbohydrates These advances combined with a modern knowledge of enzymes and cellular metabolism have provided new horizons of investigation for the student of plant physiology This volume and its companion Vol 13B present a comprehensive assessment of the current viewpoint in plant carbohydrates with emphasis on those aspects which impinge on physiological processes of growth and development To accommodate the extensive amount of information to be presented subject matter has been divided somewhat arbitrarily into intracellular and extracellular carbohydrates with the latter defined as carbohydrates occurring in space outside the plasma membrane plasmalemma This classification is not exclusive rather it is intended to lend a degree of flexibility to the way in which subject matter is arranged between volumes The first section of this volume addresses the occurrence metabolism and function of monomeric and higher saccharides of fungi algae and higher plants Medical Books and Serials in Print, 1979 R. R. Bowker LLC, 1979-05 Nucleic Acids and Proteins in Plants I D. Boulter, 2012-12-06 D BOULTER and B PARTHIER At the time of the former edition of the Encyclopedia of Plant Physiology approximately 25 years ago no complete plant protein amino acid sequences or nucleic acid sequences had been determined Although the structure of DNA and its function as the genetic material had just been reported little detail was known of the mechanism of its action and D G CATCHSIDE was to write in the first chapter of the first volume of the Encyclopedia There is a considerable body of evidence that the gene acts as a unit of physiological action through the control of individual enzymes No cell free transcription and protein synthesizing systems were available and the whole range of powerful methods of recombinant DNA technology was still to be developed

Today for the first time with plant systems it is possible not only to describe their molecular biology but also to manipulate it in order to move from a description to a technological phase. The properties of living systems are inscribed by those of the proteins and nucleic acids which they synthesize. Proteins due to their very large size occur as macromolecules in colloidal solution or associated in supra-molecular colloidal form. The colloidal state confers low thermal conductivity, low diffusion coefficients and high viscosity properties which buffer a biological system from the effects of a changing environment. Biological systems not only have great stability but also the capacity to reproduce.

Purification of Laboratory Chemicals W.L.F. Armarego, 2017-03-14 Purification of Laboratory Chemicals Eighth Edition tabulates methods taken from literature for purifying thousands of individual commercially available chemicals. To help in applying this information the more common processes currently used for purification in chemical laboratories and new methods are discussed. For dealing with substances not separately listed a chapter is included setting out the usual methods for purifying specific classes of compounds. Features empirical formulae inserted for every entry. References all important applications of each substance. Updates and confirms the accuracy of all CAS registry numbers, molecular weights, original reference and physical data. Provides increased coverage of the latest commercial chemical products including pharmaceutical chemicals, updated safety and hazard material and expanded coverage of laboratory and work practices and purification methods.
