### Scientific Inquiry Cycle: Review

Science helps communities solve problems by applying knowledge and inventing things. Often "fixed" with a local "hack" such as water recycling or waste management, using science to make or improve solutions can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective resolution.

Designing solutions becomes considering various constraints, such as budget, time, and safety concerns. Documenting important parts of a solution might include challenges, solutions, and the impact of each. Some solutions can't be tested, limiting options for a "hack" that may affect its cost and ease of use. Some influenced the effectiveness of the solution.

After identifying a solution, documenting how it works, what constraints affected it, and any compromises (trade-offs) that were made and details involved on the way. Communication, using simple words, and reflecting on the results of the solution are important steps. The process of sharing findings locally encourages responsible decision-making and helps communities thrive.

#### 01. Mark the best answer for each question.

1. What is the first important step when working on how to solve a local problem?
  - a. Thinking a solution immediately
  - b. Using the most expensive materials
  - c. Spreading safety concerns
  - d. Understanding the problem fully
2. What does documenting constraints in a solution help with?
  - a. Finding the problem of the solution
  - b. Evaluating the problem of the solution and safety
  - c. Showing how to avoid the problem
  - d. Determining what the solution has no costs
3. Which is an example of a trade-off?
  - a. Finding a solution with no cost
  - b. Spending money on the solution
  - c. The time and money needed to solve the problem
  - d. Using unsafe materials
4. Why is it important to document a solution?
  - a. To avoid not being in the solution
  - b. To make others aware
  - c. To finish the problem by comparing
  - d. To avoid documenting the solution

#### 02. Mark if the statement is True (T) or False (F).
