Welcome!

Congratulations on your decision to learn about the coolest science that exists. Biology and chemistry mashed together - what's not to love!

Course Description

The course will cover the molecular underpinnings of life. Emphasis will be placed on the structure and function of biological macromolecules in living organisms, as well as research methods used to study these molecules.

Required Materials

Lehninger 7th ed. was selected due to its reputation as a leading biochemistry text. However, a previous edition (such as the 6th ed.) should suffice. I have compared both versions and prefer the inclusion of recent advances in the newest version; however, I understand cost is a factor, and so that decision is yours.

Learning Objectives

- You should be able to **draw** and **identify** generic amino acids, nucleotides, lipids, and carbohydrates based on structure; **differentiate** between classes of biological macromolecules; **classify** biological macromolecules into categories based on chemical properties.
- You should be able to **describe** different types of bonds and **explain** their function in biological macromolecules; **predict** consequences of changes in structure; **evaluate** limitations of each type of bond and macromolecule.
- You should be able to **explain** methods of chemical synthesis, sequencing, and/or identification of biological macromolecules; **interpret** data from common biochemical techniques; **design** an experiment to test biological macromolecules using these methods.
- You should be able to **explain** how thermodynamic principles drive macromolecular structure and function, especially in the context of metabolic reactions; **describe** the basic parts of an enzyme and **explain** how it functions.
- At the end of the semester, you should know that "structure dictates function" and "chemistry is the foundation of all biology." Furthermore, I want you to feel confident that you can apply this biochemical understanding to the molecular pathogenesis of any
