Feldman, 2013-03-14 When I organized a symposium on the development of nonverbal behavior for the 1980 meeting of the American Psychological Association I was faced with an embarrassment of riches Thinking about the many people who were doing important and interesting research in this area it was hard to narrow down the choice to just a few Eventually I put together a panel which at least was representative of this burgeoning area of research In planning this volume two years later I was faced with much the same predicament except to an even larger degree For during that short period the area of children's nonverbal behavior came to grow even larger with more perspectives being brought to bear on the question of the processes involved in the development of children's nonverbal behavior The present volume attempts to capture these advances which have occurred as the field of children's nonverbal behavior has moved from its own infancy into middle childhood The book is organized into five major areas representative of the most important approaches to the study of children's nonverbal behavior 1 Psychobiological and ethological approaches 2 social developmental approaches 3 encoding and decoding skill approaches 4 discrepant verbal nonverbal communication approaches and 5 personality and individual difference approaches The discreteness of these categories should not be overemphasized as there is a good deal of overlap between the various approaches Nonetheless they do represent the major areas of interest in the field of the development of nonverbal behavior in children **Rollenübernahme und Kommunikation bei Kindern (The development of role-taking and communication skills in Children, dt.)** In Zsarb.m. Serafica, 2015-06-19 The relationship between the cognitive and social spheres of human functioning and their context has long been regarded by social and behavioural scientists as a central theoretical issue By the early 1980s a number of empirical studies had further elucidated the nature of this relationship but no attempt had been made to present a coherent picture of the research and developments in this increasingly popular area of study Originally published in 1982 the topics covered in this book filled the gap admirably They present a view of the development of aspects of the self and of self other relations and how these two lines of development interact within a given context All the contributions attempt to portray the child's developing awareness of the self in relation to the social world but all consider it from different perspectives and in varying degrees of detail This useful collection by a number of well known contributors should still be of great value to students of developmental and
