Developmental Immunology:

Developmental Immunology Edwin Lowell Cooper, Eric Nisbet-Brown, 1993 This timely comprehensive volume draws on recent advances in molecular cellular and organismal biology to provide a detailed analysis of the phylogeny and ontogeny of the immune system This first book to provide broad coverage of this field gives a clear description of cellular and molecular interactions in the development of immune function Although most of this work is based on studies in vertebrates the intriguing observations of cytokine like molecules in invertebrates are discussed In a final section the contributors deal with abnormalities in the development and regulation of the immune system including primary immunodeficiency diseases and with the normal aging of the immune system Throughout the book an effort has been made to compare and integrate information from studies in diverse systems and to discuss the limitations of such comparisons This work will be of special interest to immunologists and theoretical cell and developmental biologists and much of the book will be useful to physicians working in pediatrics internal medicine and reproductive medicine

Developmental Immunotoxicology Steven D. Holladay, 2004-11-15 Despite rapidly

increasing interest in developmental immunotoxicology there is not yet a textbook focused on this hot area of research. Developmental Immunotoxicology fills the void with overviews of immune system development in experimental animal and human models and discusses the complex issues related to the evolution of developmental immunology and risk assessment. This text describes different models used to study developmental immunotoxicology and examples of specific developmental immunotoxic agents including therapeutics. The text concludes with several chapters that describe the role of neuroimmune interactions as they relate to developmental immunotoxicology. Using a didactic approach, Developmental Immunotoxicology provides an explanatory overview of this cutting edge field for toxicologists, immunologists, and developmental biologists. It provides a lucid account of this area of research, proposing answers to some questions and stimulating debate on those questions yet to be addressed by the research community.

Immunology and Developmental Biology of the Chicken Olli Vainio, Beat A. Imhof, 2012-12-06

The chicken is a useful model for research into the basic features of immunology because its immune system functions in a way similar to that of human beings and because the chicken embryo is easily accessed experimentally. This book is a collection of comprehensive articles updating chicken embryogenesis and immunology. It is now clear that it is possible to produce transgenic chickens by embryonic stem cell manipulation and transfer into the oocyte. Alternatively, the chick offers us the possibility of producing somatic chimeras by manipulating embryonic cells at the primitive streak or earlier stages. Working with later embryos we can learn the principles involved in the positioning of organ anlagen such as the limb bud. It is shown in this book that these structures are formed by appropriate cell and tissue arrangements driven by molecular factors. Work on the chicken has contributed substantially to our understanding of basic immunology including the graft vs host reaction, the clonal reactivity of immunocompetent cells, separation of the T and B cell lineages, somatic diversification of the B cell repertoire by immunoglobulin Ig class switching, antibody diversification, Ig gene conversion, and the origin of the hematopoietic stem cell precursor of lymphoid and myeloid cells. Hematopoietic stem cells emerge successively from several embryonic sites such as the yolk sac, the aorta, and the mesentery near the aorta.

Aspects of Developmental and Comparative Immunology J. B. Solomon, 2014-05-09

Aspects of Developmental and Comparative Immunology contains the proceedings of the 1st Congress of Developmental and Comparative Immunology held from July 27 to August 1, 1980 in Aberdeen, Scotland. The papers explore various aspects of developmental and comparative immunology and cover topics ranging from the major histocompatibility complex, MHC, and membrane immunoglobulins to idiotypes and diversity, comparative ontogeny, and evolution of lymphoid organ function. Comprised of 105 chapters, this volume begins with an overview of how the host

immune system utilizes polymorphic MHC antigens as the principal tool for pseudo self versus true self distinction The reader is then introduced to the immunology of earthworms membrane immunoglobulins idiotypes and diversity Subsequent chapters focus on the evolution of lymphoid organs in vertebrates differentiation clocks in comparative immunology of mammals and birds immunorecognition in invertebrates such as insects and gastropods and the phylogeny of leucocytes in vertebrates and invertebrates The remaining sections deal with stem cells immune responses of gut associated lymphoepithelial tissue and the ontogeny of resistance to infection as well as the ontogeny of killer cells Finally the immunology of fish amphibians reptiles chickens and mammals is examined This monograph will be of interest to immunobiologists
