Devine War:

The Life and Work of Thomas Jefferson Devine Mary Owen Meredith,1930 **Numbers from Nowhere** David P. Henige,1998 In the past forty years an entirely new paradigm has developed regarding the contact population of the New World Proponents of this new theory argue that the American Indian population in 1492 was ten even twenty times greater than previous estimates In **Numbers From Nowhere** David Henige argues that the data on which these high counts are based are meager and often demonstrably wrong Drawing on a wide variety of primary and secondary sources Henige illustrates the use and abuse of numerical data throughout history He shows that extrapolation of numbers is entirely subjective however masked it may be by arithmetic and he questions what constitutes valid evidence in historical and scientific scholarship **Survey** ,1917 **The Survey** ,1919 **Lost Battles** Philip Sabin,2015-02-05 From the author s introduction Ancient battles seize the modern imagination Far from being forgotten they have become a significant aspect of popular culture prompting a continuing stream of books feature films television programs and board and computer games there is a certain escapist satisfaction in looking back to an era when conflicts between entire states turned on clear cut pitched battles between formed armies lasting just a few hours and spanning just a few miles of ground These battles were still unspeakably traumatic and grisly affairs for those involved at Cannae Hannibal s men butchered around two and a half times as many Romans out of a much smaller overall population as there were British soldiers killed on the notorious first day of the Somme However as with the great clashes of the Napoleonic era time has dulled our preoccupation with such awful human consequences and we tend to focus instead on the inspired generalship of commanders like Alexander and Caesar and on the intriguing tactical interactions of units such as massed pikemen and war elephants within the very different military context of pre gunpowder warfare **Lost Battles** takes a new and innovative approach to the battles of antiquity Using his experience with conflict simulation Philip Sabin draws together ancient evidence and modern scholarship to construct a generic grand tactical model of the battles as a whole This model unites a mathematical framework to capture the movement and combat of the opposing armies with human decisions to shape the tactics of the antagonists Sabin then develops detailed scenarios for 36 individual battles such as Marathon and Cannae and uses the comparative structure offered by the generic model to help cast light on which particular interpretations of the ancient sources on issues such as army size fit in best with the general patterns observed elsewhere Readers can use the model to experiment for themselves by re fighting engagements of their choice tweaking the scenarios to accord with their own judgment of the evidence trying out different tactics from those used historically and seeing how the battle then plays out **Lost Battles** thus offers a unique dynamic insight into ancient warfare combining academic rigor with the interest and accessibility of simulation gaming This book includes access to a downloadable computer simulation where the reader can view the author s simulations as well create their own
