New Developments in Diagnostic Virology P.A. Bachmann, 2012-12-06 The contributions to this book derived from the Seventh Munich Symposium on Microbiology on June 3 and 4 1981 which was organized by the WHO Centre for Collection and Evaluation of Data on Comparative Virology at the Institute of Medical Microbiology Infectious and Epidemic Diseases University of Munich Federal Republic of Germany One of our principal purposes was to establish a forum at which the comparative aspects of questions of current interest in the field of medical virology could be discussed In addition to the presentation of recent findings in microbiology our overall aim was to crystallize trends and indicate new directions for future research activities This book is a topical review of New Horizons in Diagnostic Virology Every one interested in virology is aware of the tremendous progress made in viral diagnostic techniques during recent years and the growing importance of viral diagnosis in human and veterinary medicine There is yet another step that diagnostic virology has to take the introduction on a routine basis of methods of molecular biology into the viral diagnostic laboratory The application of monoclonal antibodies and techniques for the chemical and biological identification of proteins carbohydrates and enzymes are discussed as is the introduction of techniques for the characterization of nucleic acids in viral diagnosis

Diagnostic Virology Protocols John R. Stephenson, Alan Warnes, 1998-08-28 A collection of cutting edge techniques for detecting most of the major viruses that afflict mankind including influenza hepatitis herpes polio mumps HIV and many more The techniques are well tested easily

reproducible and readily employ all the new technologies PCR RIA ELISA and latex agglutination that have revolutionized the field These methods not only make it possible to do the necessary analysis in hours instead of days but can also be automated in a laboratory having only low levels of biological containment Frequently the protocols for viruses causing human diseases can be adapted to similar viruses of veterinary importance Through its state of the art methods a physician can for the first time determine early in a viral infection which antiviral drug should be used and minimize the period of treatment to avoid unnecessary side effects
