Classification System Based on Fused Deep Features and LSTM Ahmed I. Shahin,Sultan Almotairi, Echocardiography is an ultrasound based imaging modality that helps the physician to visualize heart chambers and valves motion activity Recently deep learning plays an important role in several clinical computer assisted diagnostic systems There is a real need to employ deep learning methodologies to increase such systems In this paper we proposed a deep learning system to classify several echocardiography views and identify its physiological location Firstly the spatial CNN features are extracted from each frame in the echo motion Secondly we proposed novel temporal features based on neutrosophic sets The neutrosophic temporal motion features are extracted from echo motion activity To extract the deep CNN features we activated a pre trained deep ResNet model Then both spatial and neutrosophic temporal CNN features were fused based on features concatenation technique
