

# Different Stages in Developmental Psychology

## 1- Infant

An infant or newborn is the first stage in developmental psychology. Now you might be thinking about what growth or change you will see at this stage. This is the stage where the child learns how to interact with and respond to others.

## 2- Toddler

A toddler is the age group between one and three years old. It is an important stage in the development of children. In this stage, children try to learn more about the world and how to master skills.

## 3- Preschoolers

This stage refers to the rapid growth and change where preschoolers come out of their shells and explore more about the outer world. This can be a crucial stage where children need proper care from their parents.

## 4- School-going children

School-going children between the ages of 6 and 12 develop a sense of self. At this stage, the children learn to make decisions about themselves. This is the beginning stage, where children try to learn from the things they see.

## 5- Adolescent

Adolescent age can be divided into three steps. Here, the individual grows up personally and learns to be independent. This step can provide major development, both mentally and physically. You will learn to deal with responsibilities and face major aging problems.
