Ann-Christine Albertsson,2004-04-22 **Developments in Polymer Stabilisation—8** G. Scott,2012-12-06 The purpose of the present series of publications is two fold In the first place it is intended to review progress in the development of practical stabilising systems for a wide range of polymers and applications A complementary and ultimately more important objective is to accommodate these practical developments within the framework of antioxidant theory since there can be little question that further major advances in the practice of stabilisation technology will only be possible on the basis of a firm mechanistic foundation Research into the role of stable free radicals as antioxidants and stabilisers for polymers has intensified in recent years Nitroxyl radicals nitroxides were the earliest long lived radicals to be investigated in detail and Maslov and Zaikov review the developments that have taken place in understanding their reaction mechanisms from the time when they were first investigated in liquid hydrocarbon systems to the present day when their outstanding performance as light stabilisers has been the object of much scientific research Although some features of their reactivity remain obscure the authors approach the problem kinetically and indicate the factors limiting their effectiveness *Reactive Modifiers for Polymers* S. Al-Malaika,1997-06-30 There is considerable interest within the polymer industry in developing methods to modify existing polymer systems to achieve improvements in their functional or engineering properties The chemical treatment of polymers either prior to or during processing represents an inexpensive and rapid way of achieving these modifications and a great deal of research is underway directed at improving both the understanding of the processes involved and the development of the practical techniques employed The improvements obtained by chemical treatment range from subtle alteration of the chemical properties of a polymer to wholesale changes in the physical mechanical and chemical properties with the current favourable economics ensuring that industry will continue to exploit the technique in the search for improved polymer materials Written by an international team of authors drawn from both basic and applied research programmes in industry and academia and with a strong emphasis on the underlying chemistry this book forms a timely concise and accessible evaluation of the most promising technologies developed to date Chemists technologists materials scientists and engineers working in all areas of the polymer industry along with academic researchers in those fields will find this book an essential source of reference in the course of their work *Handbook of Engineering Polymeric Materials* P. Cheremisinoff,1997-07-25 Presenting practical information on new and conventional polymers and products as alternative materials and end use applications this work details technological advancements in high structure plastics and elastomers functionalized materials and their product applications The book also provides a comparison of manufacturing and
