Neural Information Processing, Masumi Ishikawa, Kenji Doya, Hiroyuki Miyamoto, Takeshi Yamakawa, 2008-06-29. These two volume books comprise the post-conference proceedings of the 14th International Conference on Neural Information Processing (ICONIP 2007) held in Kitakyushu, Japan during November 13-16, 2007. The Asia Pacific Neural Network Assembly (APNNA) was founded in 1993. The first ICONIP was held in 1994 in Seoul, Korea, sponsored by APNNA in collaboration with regional organizations. Since then, ICONIP has consistently provided prestigious opportunities for presenting and exchanging ideas on neural networks and related fields. Research fields covered by ICONIP have now expanded to include such fields as bioinformatics, brain-machine interfaces, robotics, and computational intelligence. We had 288 ordinary paper submissions and 3 special organized session proposals. Although the quality of submitted papers on the average was exceptionally high, only 60% of them were accepted after rigorous reviews, each paper being reviewed by three reviewers. Concerning special organized sessions, two out of three were accepted. In addition to ordinary submitted papers, we invited 15 special organized sessions organized by leading researchers in emerging fields to promote future expansion of neural information processing. ICONIP 2007 was held at the newly established Kitakyushu Science and Research Park in Kitakyushu, Japan. Its theme was "Towards an Integrated Approach to the Brain: Brain-Inspired Engineering and Brain Science," which emphasizes the need for cross-disciplinary approaches for understanding brain functions and utilizing the knowledge for contributions to the society. It was jointly sponsored by APNNA, Japanese Neural Network Society (JNNS), and the 21st Century COE program at Kyushu Institute of Technology.

Foundation Models for Healthcare: Innovations in Generative AI, Computer Vision, Language Models, and Multimodal Systems, Alberto Santamaria-Pang, Shuo Li, Sokratis Makrogiannis, Paul Nagy, Vaz Zavaletta, 2025-12-15. Artificial Intelligence (AI) has undergone remarkable advancements, revolutionizing fields such as general computer vision and natural language processing. These technologies, integral to the broader capabilities of AI, are increasingly relevant in the healthcare sector, particularly through the application of Generative AI and multimodal systems.
