With the increasing popularization of the Internet together with the rapid development of 3D scanning technologies and modeling tools 3D model databases have become more and more common in fields such as biology chemistry archaeology and geography People can distribute their own 3D works over the Internet search and download 3D model data and also carry out electronic trade over the Internet However some serious issues are related to this as follows 1 How to efficiently transmit and store huge 3D model data with limited bandwidth and storage capacity 2 How to prevent 3D works from being pirated and tampered with 3 How to search for the desired 3D models in huge multimedia databases This book is devoted to partially solving the above issues Compression is useful because it helps reduce the consumption of expensive resources such as hard disk space and transmission bandwidth On the downside compressed data must be decompressed to be used and this extra processing may be detrimental to some applications 3D polygonal mesh with geometry color normal vector and texture coordinate information as a common surface representation is now heavily used in various multimedia applications such as computer games animations and simulation applications To maintain a convincing level of realism many applications require highly detailed mesh models However such complex models demand broad network bandwidth and much storage capacity to transmit and store To address these problems 3D mesh compression is essential for reducing the size of 3D model representation

Braz,2013-01-03 This book constitutes the refereed proceedings of the International Conference VISIGRAPP 2011 the Joint Conference on Computer Vision Theory and Applications VISAPP on Imaging Theory and Applications IMAGAPP on Computer Graphics Theory and Applications GRAPP and on Information Visualization Theory and Applications IVAPP held in Vilamoura Portugal in March 2011 The 15 revised full papers presented together with one invited paper were carefully reviewed and selected The papers are organized in topical sections on computer graphics theory and applications imaging theory and applications information visualization theory and applications and computer vision theory and applications Active

Lighting and Its Application for Computer Vision Katsushi Ikeuchi, Yasuyuki Matsushita, Ryusuke Sagawa, Hiroshi Kawasaki, Yasuhiro Mukaigawa, Ryo Furukawa, Daisuke Miyazaki, 2020-09-07 This book describes active illumination techniques in computer vision We can classify computer vision techniques into two classes passive and active techniques Passive techniques observe the scene statically and analyse it as is Active techniques give the scene some actions and try to facilitate the analysis In particular active illumination techniques project specific light for which the characteristics are known beforehand to a target scene to enable stable and accurate analysis of the scene Traditional passive techniques have a fundamental limitation The external world surrounding us is three dimensional the image projected on a retina or an imaging device is two dimensional That is reduction of one dimension has occurred Active illumination techniques compensate for the dimensional reduction by actively controlling the illumination The demand for reliable vision sensors is rapidly increasing in many application areas such as robotics and medical image analysis This book explains this new endeavour to explore the augmentation of reduced dimensions in computer vision This book consists of three parts basic concepts techniques and applications The first part explains the basic concepts for understanding active illumination techniques In particular the basic concepts of optics are explained so that researchers and engineers outside the field can understand the later chapters The second part explains currently available active illumination techniques covering many techniques developed by the authors The final part shows how such active illumination techniques can be applied to various domains describing the issue to be overcome by active illumination techniques and the advantages of using these techniques This book is primarily aimed at 4th year undergraduate and 1st year graduate students and will also help engineers from fields beyond computer vision to use active illumination techniques Additionally the book is suitable as course material for technical seminars Proceedings Concettina Guerra, 2002 Proceedings 2003 IEEE/RSJ International Conference on Intelligent Robots and Systems, 2003
