**3D Face Processing** Zhen Wen, Thomas S. Huang, 2006-04-11 3D Face Processing Modeling Analysis and Synthesis introduces the frontiers of 3D face processing techniques It reviews existing 3D face processing techniques including techniques for 3D face geometry modeling 3D face motion modeling and 3D face motion tracking and animation Then it discusses a unified framework for face modeling analysis and synthesis In this framework the authors present new methods for modeling complex natural facial motion as well as face appearance variations due to illumination and subtle motion Then the authors apply the framework to face tracking expression recognition and face avatar for HCI interface They conclude this book with comments on future work in the 3D face processing framework 3D Face Processing Modeling Analysis and Synthesis will interest those working in face processing for intelligent human computer interaction and video surveillance It contains a comprehensive survey on existing face processing techniques which can serve as a reference for students and researchers It also covers in depth discussion on face motion analysis and synthesis algorithms which will benefit more advanced graduate students and researchers

Face Processing: Advanced Modeling and Methods Wenyi Zhao, Rama Chellappa, 2011-07-28 Major strides have been made in face processing in the last ten years due to the fast growing need for security in various locations around the globe A human eye can discern the details of a specific face with relative ease It is this level of detail that researchers are striving to create with ever evolving computer technologies that will become our perfect mechanical eyes The difficulty that confronts researchers stems from turning a 3D object into a 2D image That subject is covered in depth from several different perspectives in this volume Face Processing Advanced Modeling and Methods begins with a comprehensive introductory chapter for those who are new to the field A compendium of articles follows that is divided into three sections The first covers basic aspects of face processing from human to computer The second deals with face modeling from computational and physiological points of view The third tackles the advanced methods which include illumination pose expression and more Editors Zhao and Chellappa have compiled a concise and necessary text for industrial research scientists students and professionals working in the area of image and signal processing Contributions from over 35 leading experts in face detection recognition and image processing Over 150 informative images with 16 images in FULL COLOR illustrate and offer insight into the most up to date advanced face processing methods and techniques Extensive detail makes this a need to own book for all involved with image and signal processing
