AquaSBR Kenneth A. Mikkelsen, William Sommermeyer, 1995 *Handbook of Environment and Waste Management* Yung-Tse Hung, Lawrence K. Wang, Nazih K. Shamas, 2012 This is a compilation of topics that are at the forefront of many technical advances and practices in air and water control These include air pollution control water pollution control water treatment wastewater treatment industrial waste treatment and small scale wastewater treatment **Advanced Biological Treatment Processes** Lawrence K. Wang, Nazih K. Shamas, Yung-Tse Hung, 2010-03-10 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken Industrial Water and Waste Treatment Lawrence K. Wang, Mu-Hao Sung Wang, Yung-Tse Hung, 2025-12-09 *Industrial Water and Waste Treatment Fundamentals* the first volume in the Industrial Water and Waste Treatment series provides a comprehensive and authoritative exploration of the fundamental principles and advanced methodologies in industrial wastewater treatment It serves as a critical resource for engineers scientists and environmental professionals engaged in water quality management and sustainable industrial practices This book systematically examines biological and physicochemical treatment processes the control of key contaminants and the latest innovations in waste remediation including microbial electrochemical technologies nanomaterials and thermochemical processes for plastic waste treatment Through its rigorous analysis and integration of contemporary research this volume not only advances the theoretical and practical understanding of industrial wastewater treatment but also underscores the imperative of sustainable resource management in the face of growing environmental challenges Provides a thorough examination of biological and physicochemical treatment processes for industrial wastewater Explores emerging waste remediation technologies including microbial electrochemical systems nanomaterials and thermochemical processes Emphasizes sustainable resource management and environmental responsibility in industrial
