based on research and experience both of which confirm that children learn science best when they engage in hands on science activities rather than read from a textbook The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten This easy to read and practical book shows how to bring about the changes recommended in the standards It provides guidelines for planning and implementing an inquiry based science program in any school district The book is divided into three parts Building a Foundation for Change presents a rationale for inquiry based science and describes how teaching through inquiry supports the way children naturally learn It concludes with basic guidelines for planning a program School administrators teachers and parents will be especially interested in the second part The Nuts and Bolts of Change This section describes the five building blocks of an elementary science program Community and administrative support A developmentally appropriate curriculum Opportunities for professional development Materials support Appropriate assessment tools Together these five elements provide a working model of how to implement hands on science The third part Inquiry Centered Science in Practice presents profiles of the successful inquiry based science programs in districts nationwide These profiles show how the principles of hands on science can be adapted to different school settings If you want to improve the way science is taught in the elementary schools in your community Science for All Children is an indispensable resource
