This means that if you increase the net force on an object, its acceleration will increase proportionally. For example, if you push a shopping cart with a constant force, it will accelerate. If you push it with a greater force, it will accelerate more.</p> <p>Newton's first law of motion states that an object at rest stays at rest and an object in motion stays in motion with the same speed and in the same direction unless acted upon by an unbalanced force. This means that if you push a shopping cart with a constant force, it will continue to move at a constant velocity. If you stop pushing, it will stop.</p> <p>Newton's third law of motion states that for every action, there is an equal and opposite reaction. This means that if you push a shopping cart with a constant force, the cart will push back on you with an equal and opposite force.</p> <p>Read the passage carefully before answering the questions that follow.</p> <ol style="list-style-type: none"> What does Newton's second law of motion state? <ol style="list-style-type: none"> Acceleration is directly proportional to net force.
