

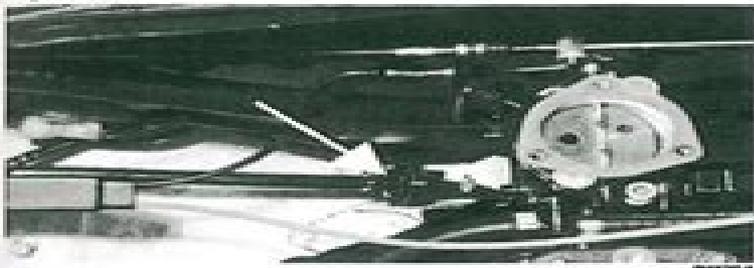

Fig. 3-296

1. Remove the in-line oil filter.
2. Inspect for obstructions or restrictions.
3. Replace as necessary.
4. Using hose clamps, secure the oil filter making sure it is positioned vertically.

## Gas Tank Vent Check-Valves

The gas tank is vented with a check-valve system. The check-valves can be tested by placing the Vacuum/Pressure Test Pump (p/n 0644-031) alternately on each end of the check-valve. The check-valve should hold pressure on one end and allow air to flow through easily on the other end. Replace the check-valve if defective.

■ **NOTE:** The check-valve in the vent hose near the water discharge fitting must allow air to flow out of the tank but not into the tank.

■ **NOTE:** The check-valve in the vent hose secured to the underside of the deck must allow air to flow into the tank but not out of the tank.

## Testing Oil-Injection Pump

1. Loosen the oil reservoir filler cap to relieve any pressure; then remove the oil-injection supply hose from the oil reservoir and cap the fitting.

2. Fill the Oil-Injection Usage Tool (p/n 0644-007) with Tigershark 50:1 Injection Oil up to the 0 line; then connect it to the oil-injection supply hose and remove the bulb.

3. Attach the flush kit to the watercraft.

### WARNING

Keep hands and clothing away from all moving parts.

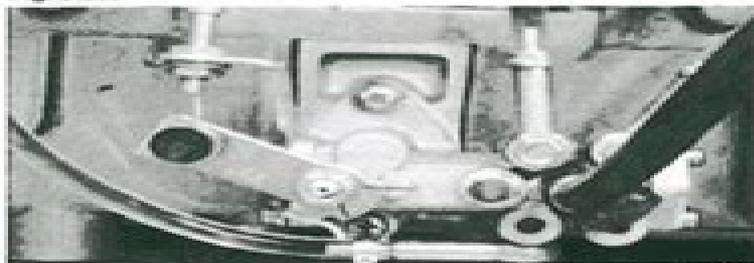

4. Start the engine; then immediately turn the water on. Run the engine at 3000 RPM for three minutes with the control arm in the full-closed (idle) position. Compare the amount of oil used to the specifications on the chart.

Fig. 3-297

5. Using a stiff wire, pull the control arm to the full-open position. Run the engine at 3000 RPM for two minutes. Compare the amount of oil used to the specifications on the chart.

Fig. 3-298
