Mechanics And Mechanical Engineering - Proceedings Of The 2015 International Conference (Mme2015)

Maosen Cao,2016-07-14 This proceedings consists of 162 selected papers presented at the 2nd Annual International Conference on Mechanics and Mechanical Engineering MME2015 which was successfully held in Chengdu China between December 25 27 2015 MME2015 is one of the key international conferences in the fields of mechanics mechanical engineering It offers a great opportunity to bring together researchers and scholars around the globe to deliver the latest innovative research and the most recent developments in the field of Mechanics and Mechanical Engineering MME2015 received over 400 submissions from about 600 laboratories colleges and famous institutes All the submissions have undergone double blind reviewed to assure the quality reliability and validity of the results presented These papers are arranged into 6 main chapters according to their research fields These are 1 Applied Mechanics 2 Mechanical Engineering and Manufacturing Technology 3 Material Science and Material Engineering 4 Automation and Control Engineering 5 Electrical Engineering 6 System Modelling and Simulation This proceedings will be invaluable to academics and professionals interested in Mechanics and Mechanical Engineering Method of Dimensionality Reduction in Contact Mechanics

Valentin L. Popov,Markus Hess,Emanuel Willert,2018-08-08 The present book is a collection of open access papers describing the foundations and applications of the Method of Dimensionality Reduction MDR first published in the Journal Facta Universitatis Series Mechanical Engineering in the years 2014 2018 The Method of Dimensionality Reduction MDR is a method of calculation and simulation of contacts of elastic and viscoelastic bodies It consists essentially of two simple steps a substitution of the three dimensional continuum by a uniquely defined one dimensional linearly elastic or viscoelastic foundation Winkler foundation and b transformation of the three dimensional profile of the contacting bodies by means of the MDR transformation As soon as these two steps are done the contact problem can be considered to be solved For axial symmetric contacts only a small calculation by hand is required which does not exceed elementary calculus and will not be a barrier for any practically oriented engineer Alternatively the MDR can be implemented numerically which is almost trivial due to the independence of the foundation elements In spite of its simplicity all results are exact The present book brings together papers covering the most important aspects of the MDR and providing a practical guide for its use

Recent Advances in Contact Mechanics Georgios E. Stavroulakis,2012-10-19 Contact mechanics is an active research area with deep theoretical and numerical roots The links between nonsmooth analysis and optimization with mechanics have been investigated intensively during the last decades especially in Europe The study of complementarity problems variational quasivariational and hemivariational inequalities arising in contact mechanics and beyond is a hot topic for interdisciplinary research and cooperation The needs of industry for robust solution algorithms suitable for large scale applications and the regular updates of the respective elements in major commercial computational mechanics codes demonstrate that this

interaction is not restricted to the academic environment The contributions of this book have been selected from the participants of the CMIS 2009 international conference which took place in Crete and continued a successful series of specialized contact mechanics conferences Catalog of Copyright Entries.
