

Boiling Point

The boiling point is the temperature at which a liquid changes into a vapor (boils).

Boiling Point of Water

at sea level
100 °C (212 °F)

at 6250 feet
93.4 °C (200.1 °F)

At the boiling point, the vapor pressure of the liquid is the same as the vapor pressure of air (or whatever is outside the liquid).

Snyder, 2022-05-26 Organic Chemistry 13th Edition continues Solomons Fryhle and Snyder's tradition of excellence in teaching and preparing students for success in both the classroom and beyond Central to the authors is their approach in emphasizing organic chemistry's relationship between structure and reactivity To accomplish this the content is organized in a way that combines the most useful features of a functional group approach with one largely based on reaction mechanisms The authors' philosophy is to emphasize mechanisms and their common aspects as often as possible and at the same time use the unifying features of functional groups as the basis for most chapters The structural aspects of the authors' approach show students what organic chemistry is Mechanistic aspects of their approach show students how it works And wherever an

opportunity arises the authors show students what it does in living systems and the physical world around us
