Boolean Methods In Operations Research:

Boolean Methods in Operations Research and Related Areas P. L. Hammer, S. Rudeanu, 2012-12-06 In classical analysis there is a vast difference between the class of problems that may be handled by means of the methods of calculus and the class of problems requiring combinatorial techniques With the advent of the digital computer the distinction begins to blur and with the increasing emphasis on problems involving optimization over structures the distinction vanishes What is necessary for the analytic and computational treatment of significant questions arising in modern control theory mathematical economics scheduling theory operations research bioengineering and so forth is a new and more flexible mathematical theory which subsumes both the classical continuous and discrete algorithms The work by HAMMER IVANESCU and RUDEANU on Boolean methods represents an important step in this direction and it is thus a great pleasure to welcome it into print It will certainly stimulate a great deal of additional research in both theory and application RICHARD BELLMAN University of Southern California FOF WOI

Boolean methods in operations research and related areas Peter L. Hammer, 1986 *Boolean Functions* Yves Crama, Peter L. Hammer, 2011-05-16 Written by prominent experts in the field this monograph provides the first comprehensive unified presentation of the structural algorithmic and applied aspects of the theory of Boolean functions The book focuses on algebraic representations of Boolean functions especially disjunctive and conjunctive normal form representations This framework looks at the fundamental elements of the theory Boolean equations and satisfiability problems prime implicants and associated short representations dualization an in depth study of special classes of Boolean functions quadratic Horn shellable regular threshold read once functions and their characterization by functional equations and two fruitful generalizations of the concept of Boolean functions partially defined functions and pseudo Boolean functions Several topics are presented here in book form for the first time Because of the depth and breadth and its emphasis on algorithms and applications this monograph will have special appeal for researchers and graduate students in discrete mathematics operations research computer science engineering and economics

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the

bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

Discrete Optimization I, 2000-04-01 Discrete Optimization I **Logic Programming and Automated Reasoning** Andrei Voronkov, 1993-06-29 LPAR is an international conference series aimed at bringing together researchers interested in logic programming and automated reasoning The research in logic programming grew out of the research in automated reasoning in the early 1970s Later the implementation techniques known from logic programming were used in implementing theorem proving systems Results from both fields applied to deductive databases This volume contains the proceedings of LPAR 93 which was organized by the Russian Association for Logic Programming The volume contains 35 contributed papers selected from 84 submissions together with an invited paper by Peter Wegner entitled Reasoning versus modeling in computer science

Optimization in integers and related extremal problems Thomas L. Saaty, 2014-12-19 This text the first of its kind surveys the entire field of optimization in integers It is designed for students of mathematics engineering science social science and operations research It will stimulate and excite the reader's interest in the elementary methods and ideas of discrete optimization and related problems The text presents the current theories and a wide variety of examples and applications of optimization in integers in both geometric and algebraic settings Coverage is given to a wide class of problems and the ways in which they may be handled The text includes numerous exercises and illustrations

Discrete Optimization E. Boros, P.L. Hammer, 2003-03-19 One of the most frequently occurring types of optimization problems involves decision variables which have to take integer values From a practical point of view such problems occur in countless areas of management engineering administration etc and include such problems as location of plants or warehouses scheduling of aircraft cutting raw materials to prescribed dimensions design of computer chips increasing reliability or capacity of networks etc This is the class of problems known in the professional literature as discrete optimization problems While these problems are of enormous applicability they present many challenges from a computational point of view This volume is an update on the impressive progress achieved by mathematicians operations researchers and computer scientists in solving discrete optimization problems of very large sizes The surveys in this volume present a comprehensive overview of the state of the art in discrete optimization and are written by the most prominent researchers from all over the world This volume describes the tremendous progress in discrete optimization achieved in the last 20 years since the publication of Discrete Optimization 77 Annals of Discrete Mathematics volumes 4 and 5 1979 Elsevier It contains surveys of the state of the art written by the most prominent researchers in the field from all over the world and covers topics like neighborhood search techniques lift and project for mixed 0 1 programming pseudo Boolean optimization scheduling and assignment problems production planning location bin packing

cutting planes vehicle routing and applications to graph theory mechanics chip design etc Key features state of the art surveys comprehensiveness prominent authors theoretical computational and applied aspects This book is a reprint of Discrete Applied Mathematics Volume 23 Numbers 1 3 **Encyclopaedia of Mathematics** M. Hazewinkel,2013-12-01 Mathematical Reviews ,1992 Industrial Engineering Methods and Controls Donald R. Herzog,1985 **Reviews in Graph Theory** William G. Brown,1980 U.S. Government Research & Development Reports ,1965 **Encyclopaedia of Mathematics** Michiel Hazewinkel,2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques **Boolean Models and Methods in Mathematics, Computer Science, and Engineering** Yves Crama,Peter L. Hammer,2010-06-28 A collection of papers written by prominent experts that examine a variety of advanced topics related to Boolean functions and expressions *Graph Theory, Combinatorics, Algorithms, and Applications* Y. Alavi,1991 The Conference participants included research mathematicians and computer scientists from colleges universities and industry representing various countries China which hosted the First International Conference in 1986 is particularly well represented The 58 contributions to this proceedings v Algebraic and Combinatorial Methods in Operations Research R.E. Burkard,R.A. Cuninghame-Green,U. Zimmermann,1984-01-01 For the first time this book unites different algebraic approaches for discrete optimization and operations research The presentation of some fundamental directions of this new fast developing area shows the wide range of its applicability Specifically the book contains contributions in the following fields semigroup and semiring theory applied to combinatorial and integer programming network flow theory in ordered algebraic structures extremal optimization problems decomposition principles for discrete structures Boolean methods in graph theory and applications **Symposia Mathematica** ,1976 **AIIE Transactions** American Institute of Industrial Engineers,1976 Management Science ,1980
