Boron-nitrogen Compounds:

Boron-Nitrogen Compounds Kurt Niedenzu, J.W. Dawson, 2012-12-06 Although the chemistry of boron is still relatively young it is developing at a pace where even specific areas of research are difficult to compile into a monograph Besides the boron hydrides boron nitrogen compounds are among the most fascinating derivatives of boron Nitrogen compounds exist in a wide variety of molecular structures and display many interesting properties The combination of nitrogen and boron however has some unusual features that are hard to match in any other combination of elements This situation was first recognized by ALFRED STOCK and it seems proper to pay tribute to his outstanding work in the area of boron chemistry One should realize that about forty years ago STOCK and his coworkers had to develop completely new experimental techniques and that no guidance for the interpretation of their rather unusual data had been advanced by theoretical chemists In this monograph an attempt has been made to explore the general characteristics of structure and the principles involved in the preparation and reactions of boron nitrogen compounds It was a somewhat difficult task to select that information which appears to be of the most interest to inorganic and general chemistry since the electronic relationship between a boron nitrogen and a carbon carbon grouping is reflected in the organic character of many of the reactions and compounds
